

## Draft Accounting Standard AASB 10XY Service Concession Arrangements: Grantor

### Objective

- 1 The objective of this [draft] Standard is to prescribe the accounting for a service concession arrangement by a grantor that is a public sector entity.
- 2 **This [draft] Standard applies to:**
- (a) each entity that is required to prepare financial reports in accordance with Part 2M.3 of the Corporations Act 2001 and that is a reporting entity;
  - (b) general purpose financial statements of each other reporting entity; and
  - (c) financial statements that are, or are held out to be, general purpose financial statements.
- 3 **This [draft] Standard applies to annual reporting periods beginning on or after 1 January 2017.**
- 4 **This [draft] Standard may be applied to annual reporting periods beginning before 1 January 2017. When an entity applies this [draft] Standard to such an annual reporting period, it shall disclose that fact.**

### Scope

- 5 **This [draft] Standard shall be applied to arrangements that involve an operator providing a public service related to a service concession asset on behalf of a grantor.**
- 6 Arrangements outside the scope of this [draft] Standard include those that do not involve the delivery of a public service and arrangements that involve service and management components where the asset is not controlled by the grantor, as described in paragraph 8, or paragraph 9 for a whole-of-life asset ~~(eg outsourcing, service contracts, or privatisation)~~.
- 7 This [draft] Standard does not specify the accounting by operators. Guidance on accounting for service concession arrangements by the operator can be found in AASB Interpretation 12 *Service Concession Arrangements*.

### Recognition and Measurement of a Service Concession Asset

- 8 **The grantor shall recognise an asset provided by the operator and an upgrade to an existing asset of the grantor as a service concession asset if the grantor controls the asset. The grantor controls the asset if, and only if:**
- (d) the grantor controls or regulates what services the operator must provide with the asset, to whom it must provide them, and at what price; and
  - (e) the grantor controls – through ownership, beneficial entitlement or otherwise – any significant residual interest in the asset at the end of the term of the arrangement.
- 9 **The grantor shall recognise an asset that will be used in a service concession arrangement for its entire useful life (a ‘whole-of-life’ asset) if the conditions in paragraph 8(a) are met.**
- 10 **The grantor shall initially measure the service concession asset recognised in accordance with paragraph 8 (or paragraph 9 for a whole-of-life asset) at its fair value in accordance with AASB 13 *Fair Value Measurement*, except as noted in paragraph 11.**
- 11 **Where an existing asset of the grantor meets the conditions specified in paragraph 8 (or paragraph 9 for a whole-of-life asset), the grantor shall reclassify the existing asset as a service concession asset. The reclassified service concession asset shall be accounted for in accordance with AASB 116**

**Comment [SD1]:  
Note to the Board**

Staff have retained paragraphs 2 to 4 of ED 261 for the purpose of this draft Standard. These paragraphs will be replaced by the “Commencement of the Legislative Instrument”, paragraph 34 in the final Standard.

**Comment [SD2]:  
Note to the Board**

Staff reformatted the proposals in ED 261 to the new format for principal Standards.

For the Board’s reference at this stage, Staff have retained the paragraph numbers of ED 261 in this draft AASB 10XY *Service Concession Arrangements: Grantor*.

**Comment [SD3]:  
Decision 7:**

Amended paragraph 6

**Comment [SD4]:  
Decision 1:**

No changes to paragraph 8

*Property, Plant and Equipment* or AASB 138 *Intangible Assets*, as appropriate, in accordance with this [draft] Standard.

- 12 After initial recognition or reclassification, service concession assets shall be accounted for as a separate class or, where appropriate, separate classes of assets, in accordance with AASB 116 or AASB 138, as appropriate.

## Recognition and Measurement of Liabilities

---

- 13 Where the grantor recognises a service concession asset in accordance with paragraph 8 (or paragraph 9 for a whole-of-life asset), the grantor shall also recognise a liability. The grantor shall not recognise a liability when an existing asset of the grantor is reclassified as a service concession asset in accordance with paragraph 11, except in circumstances where additional consideration is provided by the operator, as noted in paragraph 14.
- 14 The liability recognised in accordance with paragraph 13 shall be initially measured at the same amount as the service concession asset, adjusted by the amount of any other consideration (eg the transfer of an existing asset) from the grantor to the operator, or from the operator to the grantor.
- 15 The nature of the liability recognised is based on the nature of the consideration exchanged between the grantor and the operator. The nature of the consideration given by the grantor to the operator is determined by reference to the terms of the *contract*.
- 16 In exchange for the service concession asset, the grantor may compensate the operator for the service concession asset by any combination of:
- (a) making payments to the operator (the ‘financial liability’ model); and
  - (b) compensating the operator by other means (the ‘grant of a right to the operator’ model) such as:
    - (i) granting the operator the right to earn revenue from third-party users of the service concession asset; or
    - (ii) granting the operator access to another revenue-generating asset for the operator’s use (eg a private wing of a hospital where the remainder of the hospital is used by the grantor to treat public patients or a private parking facility adjacent to a public facility).

## Financial Liability Model

- 17 Where the grantor has a contractual obligation to deliver cash or another financial asset to the operator for the construction, development, acquisition or upgrade of a service concession asset, the grantor shall account for the liability recognised in accordance with paragraph 13 as a financial liability.
- 18 The grantor has a contractual obligation to pay cash if it has agreed to pay the operator:
- (a) specified or determinable amounts; or
  - (b) the shortfall, if any, between amounts received by the operator from users of the public service and any specified or determinable amounts referred to in paragraph 18(a) even if the payment is contingent on the operator ensuring that the service concession asset meets.
- 19 AASB 132 *Financial Instruments: Presentation*, the derecognition requirements in AASB 9 *Financial Instruments*<sup>1</sup> and AASB 7 *Financial Instruments: Disclosures* apply to the financial liability recognised under paragraph 13, except where this [draft] Standard provides requirements and guidance.
- 20 The grantor shall allocate the payments to the operator under the contract and account for them according to their substance as a reduction in the liability recognised in accordance with paragraph 13, a finance charge and charges for services provided by the operator.
- 21 The finance charge and charges for services provided by the operator in a service concession arrangement determined in accordance with paragraph 20 shall be accounted for in accordance with other relevant Australian Accounting Standards.
- 22 Where the asset and service components of a service concession arrangement are separately identifiable, the service components of payments from the grantor to the operator shall be allocated accordingly. Where the asset and service components are not separately identifiable, the service

---

<sup>1</sup> If the entity has yet to adopt AASB 9 *Financial Instruments*, references in this [draft] Standard to AASB 9 should be read as AASB 139 *Financial Instruments: Recognition and Measurement*.

component of payments from the grantor to the operator shall be determined using estimation techniques.

### **Grant of a Right to the Operator Model**

- 23 Where the grantor does not have a contractual obligation to pay cash or another financial asset to the operator for the construction, development, acquisition, or upgrade of a service concession asset, and instead grants the operator the right to earn revenue from third-party users or another revenue-generating asset, the grantor shall account for the liability recognised in accordance with paragraph 13 as the unearned portion of the revenue arising from the exchange of assets between the grantor and the operator.
- 24 The grantor shall recognise revenue, and accordingly reduce the liability recognised in accordance with paragraph 23, according to the economic substance of the service concession arrangement.
- 25 Where the grantor compensates the operator for the service concession asset and the provision of services, by granting the operator the right to earn revenue from third-party users of the service concession asset or another revenue-generating asset, the exchange is regarded as a transaction that generates revenue. As the right granted to the operator is effective for the period of the service concession arrangement, the grantor does not recognise revenue from the exchange immediately. Instead, a liability is recognised for revenue that is not yet earned. The revenue is then recognised according to the economic substance of the service concession arrangement, and the liability is reduced as revenue is recognised.

### **Dividing the Arrangement**

- 26 If the grantor pays for the construction, development, acquisition, or upgrade of a service concession asset partly by incurring a financial liability and, partly by the grant of a right to the operator, it is necessary to account separately for each part of the total liability recognised in accordance with paragraph 13. The amount initially recognised for the total liability shall be the same amount as that specified in paragraph 14.
- 27 The grantor shall account for each part of the liability referred to in paragraph 26 in accordance with paragraphs 17 – 25.

### **Other Liabilities, Commitments, Contingent Liabilities and Contingent Assets**

---

- 28 The grantor shall account for other liabilities, commitments, contingent liabilities and contingent assets arising from a service concession arrangement in accordance with AASB 137 *Provisions, Contingent Liabilities and Contingent Assets*, AASB 9, and other relevant Australian Accounting Standards.

### **Other Revenues**

---

- 29 The grantor shall account for revenues from a service concession arrangement, other than those specified in paragraphs 23 – 25, in accordance with AASB 10XX *Income of Not-for-Profit Entities*.

### **Presentation and Disclosure**

---

- 30 The grantor shall present information in accordance with AASB 101 *Presentation of Financial Statements*.
- 31 All aspects of a service concession arrangement shall be considered in determining the appropriate disclosures in the notes. A grantor shall disclose the following information in respect of service concession arrangements in each reporting period:
- (a) a description of the arrangement;
  - (b) significant terms of the arrangement that may affect the amount, timing and certainty of future cash flows (eg the period of the concession, re-pricing dates and the basis upon which re-pricing or re-negotiation is determined);
  - (c) the nature and extent (eg quantity, time period, or amount, as appropriate) of:

- (i) rights to access specified assets;
  - (ii) rights to receive specified services in relation to the service concession arrangement from the operator;
  - (iii) service concession assets recognised as assets during the reporting period, including existing assets of the grantor reclassified as service concession assets;
  - (iv) rights to receive specified assets at the end of the service concession arrangement;
  - (v) renewal and termination options;
  - (vi) other rights and obligations (eg major overhaul of service concession assets); and
  - (vii) obligations to provide the operator with access to service concession assets or other revenue-generating assets; and
- (d) changes in the arrangement occurring during the reporting period.

32 The disclosures required in accordance with paragraph 31 are provided individually for each material service concession arrangement or in aggregate for each class of service concession arrangements.

## **Transition**

---

33 A grantor shall either:

- (a) apply this [draft] Standard retrospectively in accordance with AASB 108 *Accounting Policies, Changes in Accounting Estimates and Errors*; or
- (b) elect to recognise and measure service concession assets and related liabilities at the beginning of the earliest period for which comparative information is presented in the financial statements using deemed cost. Deemed cost for service concession assets is the fair value in accordance with AASB 13.

When the grantor makes an election to apply deemed cost, it shall disclose this fact, along with disclosures relating to the measurement of those assets and liabilities.

## **Commencement of the Legislative Instrument**

---

34 For legal purposes, this legislative instrument commences on 31 December 2016.

## Appendix A Defined Terms

*This appendix is an integral part of AASB 10XY.*

<b>contract</b>	An agreement between two or more parties that creates enforceable rights and obligations.
<b>grantor</b>	The entity that grants the right to access the <b>service concession asset</b> to the <b>operator</b> .
<b>operator</b>	The entity that has a right of access to the <b>service concession asset</b> to provide <b>public services</b> subject to the <b>grantor</b> 's control of the asset.
<b>public service</b>	A service that is provided by government or one of its controlled entities, as part of the usual government function, to the community, either directly (through the public sector) or by financing the provision of services.
<b>service concession arrangement</b>	A <b>contract</b> between a <b>grantor</b> and an <b>operator</b> in which: <ul style="list-style-type: none"><li>(a) the <b>operator</b> has the right of access to the <b>service concession asset</b> to provide a <b>public service</b> on behalf of the <b>grantor</b> for a specified period of time; and</li><li>(b) the <b>operator</b> is compensated for its services over the period of the <b>service concession arrangement</b>.</li></ul>
<b>service concession asset</b>	An asset used to provide <b>public services</b> in a <b>service concession arrangement</b> that: <ul style="list-style-type: none"><li>(a) is provided by the <b>operator</b> which:<ul style="list-style-type: none"><li>(i) the <b>operator</b> constructs, develops, or acquires from a third party; or</li><li>(ii) is an existing asset of the <b>operator</b>; or</li></ul></li><li>(b) is provided by the <b>grantor</b> which:<ul style="list-style-type: none"><li>(i) is an existing asset of the <b>grantor</b>; or</li><li>(ii) is an upgrade to an existing asset of the <b>grantor</b>.</li></ul></li></ul>

## Appendix B Application Guidance

*This appendix is an integral part of AASB 10XY.*

### Scope (paragraphs 5 – 7)

---

- AG1 This [draft] Standard is intended to ‘mirror’ AASB Interpretation 12 *Service Concession Arrangements*, which sets out the accounting requirements for the operator in a service concession arrangement. To do so, the scope, principles for recognition of an asset, and terminology are consistent with the applicable guidance in AASB Interpretation 12. However, because this [draft] Standard deals with the accounting issues of the grantor, this [draft] Standard addresses the issues identified in AASB Interpretation 12 from the grantor’s point of view, as follows:
- (a) the grantor recognises a financial liability when it is obliged to make a series of payments to the operator for provision of a service concession asset (ie constructed, developed, acquired or upgraded). Under paragraphs 12, 14 and 20 of AASB Interpretation 12, the operator recognises revenue for the construction, development, acquisition, upgrade and operation services it provides. Under paragraph 16 of AASB Interpretation 12, the operator recognises a financial asset;
  - (b) the grantor recognises a liability when it grants the operator the right to earn revenue from third-party users of the service concession asset or another revenue-generating asset. Under paragraph 26 of AASB Interpretation 12, the operator recognises an intangible asset;
  - (c) the grantor derecognises an asset it grants to the operator and over which it no longer has control and reduces the liability recognised under paragraph 14. Under paragraph 27 of AASB Interpretation 12, the operator recognises the asset and a liability in respect of any obligations it has assumed in exchange for the asset.
- AG2 Paragraph 8 of this [draft] Standard specifies the conditions under which an asset, other than a whole-of-life asset, is within the scope of the [draft] Standard and is recognised by the grantor. Paragraph 9 of the [draft] Standard specifies the condition under which whole-of-life assets are within the scope of the [draft] Standard and are recognised by the grantor.

### Definitions (Appendix A)

---

- AG3 Appendix A defines a service concession arrangement. A feature of a service concession arrangement is the public service nature of the obligation to be undertaken by the operator in a commercial transaction. The public service to be provided by the service concession asset is irrespective of the identity of the party that operates the services. The service concession arrangement contractually obliges the operator to provide the services to the public on behalf of the public sector entity. Other common features of a service concession arrangement within the scope of this [draft] Standard are:
- (a) the grantor is a public sector entity;
  - (b) the operator is responsible for at least some of the management of the service concession asset and related services and does not merely act as an agent on behalf of the grantor;
  - (c) the arrangement sets the initial prices to be levied by the operator and regulates price revisions over the period of the service concession arrangement;
  - (d) the operator is obliged to hand over the service concession asset to the grantor in a specified condition at the end of the period of the arrangement, for little or no incremental consideration, irrespective of which party initially financed it; and
  - (e) the arrangement is governed by a contract that sets out performance standards, mechanisms for adjusting prices, and arrangements for arbitrating disputes.
- AG4 Appendix A defines a service concession asset. Examples of service concession assets are roads, bridges, tunnels, prisons, hospitals, airports, water distribution facilities, energy supply and telecommunication networks, permanent installations for military and other operations, and other tangible or intangible assets that are expected to be used during more than one reporting period in delivering public services.

- AG5 The term ‘agreement’ in the definition of a ‘contract’ in Appendix A encompasses an arrangement entered into under the direction of another party (for example, when assets are transferred to an entity with a directive that they be deployed to provide specified services, or regulation or legislation is imposed in relation to the assets).
- AG6 Contracts can be written, oral or implied by an entity’s customary business practices in performing or conducting its activities.

## Recognition and Initial Measurement of a Service Concession Asset

### Recognition of a Service Concession Asset

#### Control

- AG7 The assessment of whether a service concession asset should be recognised in accordance with paragraph 8 (or paragraph 9 for a whole-of-life asset) is made on the basis of all of the facts and circumstances of the arrangement.
- AG8 The fundamental principle reflected in paragraph 8 is determining which entity controls the underlying ~~infrastructure asset~~ of a service concession arrangement.
- AG8A The control or regulation referred to in paragraph 8(a) could be by a contract, or otherwise. If the contract specifies that the grantor controls or regulates the price, services and/or to whom the operator must provide the services, the conditions specified in paragraph 8(a) are met.
- AG8B The ability to exclude or regulate the access of others to the benefits of an asset is an essential element of control that distinguishes an entity’s assets from those public goods that all entities have access to and benefit from. For example, the contract may set the initial prices to be levied by the operator and regulate price revisions over the period of the service concession arrangement. When the contract conveys the right to control the use of the service concession asset to the grantor, the asset meets the condition specified in paragraph 8(a) regarding control in relation to those to whom the operator must provide services, irrespective of the involvement of a third-party regulator.
- AG8C Control should be distinguished from management. If the grantor retains both the degree of control described in paragraph 8(a) and any significant residual interest in the asset, the operator is only managing the asset on the grantor’s behalf – even though, in many cases, it may have wide managerial discretion.

#### Regulation

- AG8 Regulation of what services the operator must provide, to whom it must provide them, and at what price, in the manner specified in paragraph 8(a), is a means by which a grantor can exercise and demonstrate control of the substantive benefits of the service concession asset.
- AG9 ~~The control or regulation referred to in paragraph 8(a) could be by a contract, or otherwise. This could be through a third party regulator that regulates other entities that operate in the same industry or sector as the grantor. It may include circumstances in which the grantor buys all of the output as well as those in which some or all of the output is bought by other users. The ability to exclude or regulate the access of others to the benefits of an asset is an essential element of control that distinguishes an entity’s assets from those public goods that all entities have access to and benefit from. The contract sets the initial prices to be levied by the operator and regulates price revisions over the period of the service concession arrangement. When the contract conveys the right to control the use of the service concession asset to the grantor, the asset meets the condition specified in paragraph 8(a) regarding control in relation to those to whom the operator must provide services.~~
- AG8D A grantor may have control of a service concession asset in an environment where a third-party regulator regulates the price, service and/or to whom the services must be provided. This could be through a third-party regulator that regulates other entities that operate in the same industry or sector as the grantor. It includes circumstances in which the grantor buys all of the services as well as those in which some or all of the services are bought by other users.
- AG10 For the purpose of paragraph 8(a), the grantor does not need to have complete control of the price: it is sufficient for the price to be regulated by the grantor, or a third-party regulator (eg by a capping mechanism). However, the condition shall be applied to the substance of the agreement. Non-substantive features, such as a cap that will apply only in remote circumstances, shall be ignored. Conversely, if, for example, an arrangement purports to give the operator freedom to set prices, but any excess profit is returned to the grantor, the operator’s return is capped and the price element of the control test is met.

**Comment [SD5]:**  
**Decision 5:**  
 -Deleted AG9  
 -AG8A-AG8D

**Comment [SD6]:**  
**Decision 2:**  
 Seek clarification from the Board.

**Note to the Board**  
 The Board at its December 2015 requested Staff refine the changes to paragraphs AG8A-AG8D. Staff are seeking the Board’s view on the extent of refinement or changes to paragraphs AG8A-AG8D.

- AG11 Prices are controlled in a regulated environment when a third-party regulator regulates the pricing of the services provided with a service concession asset. This removes the ability of the operator to regulate the price and, for the purpose of paragraph 8(a), the pricing of the services is considered to be set implicitly by the grantor.
- AG12 Where a third-party regulator regulates the services that the asset must provide (as specified in paragraph 8(a)), it is not essential for the grantor to direct the activities of the third-party regulator for the grantor to have control of the service concession asset. For example, a State grantor in a service concession arrangement might meet the condition specified in paragraph 8(a) even though the relevant regulation is carried out by an independent Commonwealth regulator. Furthermore, subject to paragraph AG14, it is not necessary for the grantor to refer to the regulator in the contract. The grantor might rely on the regulator exercising its powers within the parameters set when the regulator was established.
- AG13 Many governments have the power to regulate the behaviour of entities operating in certain sectors of the economy, either directly or through specifically created agencies. For the purpose of paragraph 8(a), such broad regulatory powers do not constitute control. In this [draft] Standard, the term ‘regulate’ is intended to be applied only in the context of the specific terms and conditions of the service concession arrangement. For example, a regulator of rail services may determine rates that apply to the rail industry as a whole. Depending on the legal framework in a jurisdiction, such rates may be implicit in the contract governing a service concession arrangement involving the provision of railway transportation, or they may be specifically referred to therein. However, in both cases, the control of the service concession asset is derived from either the contract or the specific regulation applicable to rail services and not from the fact that the grantor is a public sector entity that is related to the regulator of rail service.
- AG14 ~~Where a service concession arrangement does not clearly fall within an existing regulatory framework (eg where there is more than one possible source of regulation), the arrangement will need to incorporate the specific regulatory framework that stipulates the use, the users and/or the pricing to be charged for the services in order for the requirements of paragraph 8(a) to be met. grantor to have control of the service concession asset. For the purpose of paragraph 8(b), the grantor’s control over any significant residual interest should both restrict the operator’s practical ability to sell or pledge the asset and give the grantor a continuing right of use throughout the period of the service concession arrangement. The residual interest in the asset is the estimated current value of the asset as if it were already of the age and in the condition expected at the end of the period of the service concession arrangement.~~
- AG15 ~~Control should be distinguished from management. If the grantor retains both the degree of control described in paragraph 8(a) and any significant residual interest in the asset, the operator is only managing the asset on the grantor’s behalf – even though, in many cases, it may have wide managerial discretion.~~
- AG16 Paragraph 8 identifies when the asset, including any replacements required, is controlled by the grantor for the whole of its economic life. For example, if the operator has to replace part of an asset during the period of the arrangement (eg the top layer of a road or the roof of a building), the asset shall be considered as a whole. Thus the condition in paragraph 8(b) is met for the whole of the asset, including the part that is replaced, if the grantor controls any significant residual interest in the final replacement of that part -
- AG17 Sometimes the use of a service concession asset is partly regulated in the manner described in paragraph 8(a) and partly unregulated. However, these arrangements take a variety of forms:
- (a) any asset that is physically separable and capable of being operated independently and meets the definition of a cash-generating unit as defined in AASB 136 *Impairment of Assets* is analysed separately to determine whether the condition set out in paragraph 8(a) is met if it is used wholly for unregulated purposes (eg this might apply to a private wing of a hospital, where the remainder of the hospital is used by the grantor to treat public patients); and
  - (b) when purely ancillary activities (such as a hospital shop) are unregulated, the control tests shall be applied as if those services did not exist, because in cases in which the grantor controls the services in the manner described in paragraph 8(a), the existence of ancillary activities does not detract from the grantor’s control of the service concession asset.
- AG18 There may be arrangements that include unregulated services that are neither purely ancillary nor delivered by using a physically separable portion of the total asset. For example, a grantor may control prices charged to children and seniors at a sports facility but the amounts charged to adults are not controlled. The same facilities are being used by all, regardless of the amount they pay. Alternatively, price regulation could be controlled by the grantor for services provided at certain times of the day rather than different classes of user. In such cases, it will be a matter of judgement whether enough of the service is regulated in order to demonstrate that the grantor has control of the asset.
- AG19 The operator may have a right to use the separable asset described in paragraph AG17(a), or the facilities used to provide ancillary unregulated services described in paragraph AG17(b). In either case, there may in

**Comment [SD7]:**  
**Decision 10:**  
 Amended AG14

substance be a lease from the grantor to the operator; if so, it shall be accounted for in accordance with AASB 117 *Leases*.

### **Control concept in other Australian Accounting Standards**

**AG19A** ~~To the extent that an~~ If the asset meets the conditions in paragraph 8 (or paragraph 9), the grantor has the right to control the use of the asset and therefore shall recognise the asset in accordance with this Standard. An asset that does not meet the control criteria of this Standard ~~should be~~ is assessed to determine whether it ~~shall be~~ is recognised under another Accounting Standard. This includes ~~the assessment of~~ whether the asset should be accounted for in accordance with AASB 101 *Presentation of Financial Statements*, AASB 116, AASB 138, AASB 117 or any other relevant Standards. The Implementation Guidance to this Standard contains a table that highlights the continuum of typical arrangements and ~~the~~ relevant accounting requirements.

**Comment [SD8]:**  
**Decision 3:**  
AG19A

### **Long term leases, outsourcing or privatisation**

**AG19B** Long term leasing, outsourcing, service or privatisation arrangements may fall outside the scope of this Standard if the arrangement does not meet the control criteria of paragraph 8 (or paragraph 9). For example, such an arrangement may involve a grantor conveying the right of ~~to use~~ access to the asset to another entity (the private sector purchaser). An arrangement that conveys the right of ~~to use~~ access to the asset may also convey to the purchaser the right to control the use of the underlying asset. The asset of such an arrangement shall be assessed as to whether it should be accounted for in accordance with AASB Interpretation 4 *Determining whether an Arrangement contains a Lease*.

**Comment [SD9]:**  
**Decision 7:**  
AG19B

### **Changes in control**

**AG19C** The grantor's control of the service concession asset may change during the term of the service concession arrangement. The change in the grantor's control of the asset may arise from ~~the changes in~~ the terms of the service concession contract, or ~~the changes in~~ the third-party regulation of the price and/or service.

**AG19D** Where the grantor's control of the asset changes, the asset should be assessed to determine whether the asset is still within the scope of this Standard.

**AG19E** Where the grantor no longer has control of the asset in accordance with this Standard, the asset shall be assessed to determine whether it shall be recognised under other Accounting Standards.

**Comment [SD10]:**  
**Decision 9:**  
AG19C-AG19E

### **Residual interest**

**AG19F** The grantor must also control through ownership, beneficial entitlement or otherwise any significant residual interest in the asset at the end of the term of the arrangement for the requirements of paragraph 8(b) to be met.

**AG19G** For the purpose of paragraph 8(b), the grantor's control over any significant residual interest should both restrict the operator's practical ability to sell or pledge the asset and give the grantor a continuing right of use throughout the period of the service concession arrangement. The residual interest in the asset is the estimated fair value of the asset (determined at the inception of the arrangement) as if it were already of the age and in the condition expected at the end of the period of the service concession arrangement.

**AG19H** Paragraph 8 identifies when the asset, including any replacements required, is controlled by the grantor for the whole of its economic life. For example, if the operator has to replace part of an asset during the period of the arrangement (eg the top layer of a road or the roof of a building), the asset shall be considered as a whole. Thus the condition in paragraph 8(b) is met for the whole of the asset, including the part that is replaced, if the grantor controls any significant residual interest in the final replacement of that part.

**Comment [SD11]:**  
**Decision 10:**  
AG19F-AG19I

### **Whole-of-life asset**

**AG19I** For the purpose of paragraph 9, whole-of-life asset is taken to mean when the term of the arrangement is the entire useful life or the major part of the useful life of the asset.

### **Existing Asset of the Grantor**

**AG20** The arrangement may involve an existing asset of the grantor:

- (a) to which the grantor gives the operator access for the purpose of the service concession arrangement; or

- (b) to which the grantor gives the operator access for the purpose of generating revenues as compensation for the service concession asset.

- AG21 The requirement in paragraph 10 is to measure assets recognised in accordance with paragraph 8 (or paragraph 9 for a whole-of-life asset) initially at fair value. Existing assets of the grantor used in the service concession arrangement shall be reclassified rather than recognised under this [draft] Standard. However, when an existing asset of the grantor is upgraded (eg increases in capacity), the upgrade component of the asset shall be recognised as a service concession asset in accordance with paragraph 8 (or paragraph 9 for a whole-of-life asset).
- AG22 In applying the impairment tests in AASB 116 *Property, Plant and Equipment* or AASB 138 *Intangible Assets*, as appropriate, the grantor does not necessarily consider the granting of the service concession to the operator as a circumstance that causes impairment, unless there has been a change in use of the asset that affects its future economic benefits or service potential. The grantor shall refer to AASB 136 to determine whether any of the indicators of impairment have been triggered under such circumstances.
- AG23 If the asset no longer meets the conditions for recognition in paragraph 8 (or paragraph 9 for a whole-of-life asset), the grantor shall follow the derecognition principles in AASB 116 or AASB 138, as appropriate. For example, if the asset is transferred to the operator on a permanent basis, it shall be derecognised. Alternatively, the grantor may be required to derecognise the asset at a point when it or a third-party regulator no longer regulates the pricing, but rather allows the operator to freely set prices for use of the service concession asset.
- AG24 If the asset is transferred on a temporary basis, the grantor considers the substance of this term of the service concession arrangement in determining whether the asset should be derecognised. In such cases, the grantor shall also consider whether the arrangement is a lease transaction or a sale and leaseback transaction that should be accounted for in accordance with AASB 117.
- AG25 When the service concession arrangement involves upgrading an existing asset of the grantor such that the future economic benefits or service potential the asset will provide are increased, the upgrade shall be assessed to determine whether it meets the conditions for recognition in paragraph 8 (or paragraph 9 for a whole-of-life asset). If those conditions are met, the upgrade shall be recognised and measured in accordance with this [draft] Standard.

### **Existing Asset of the Operator**

- AG26 The operator may provide an asset for use in the service concession arrangement that it has not constructed, developed, or acquired for the purpose of the arrangement. If the arrangement involves an existing asset of the operator which the operator uses for the purpose of the service concession arrangement, the grantor shall determine whether the asset meets the conditions in paragraph 8 (or paragraph 9 for a whole-of-life asset). If the conditions for recognition are met, the grantor shall recognise the asset as a service concession asset and account for it in accordance with this [draft] Standard.

### **Constructed or Developed Asset**

- AG27 Where a constructed or developed asset meets the conditions in paragraph 8 (or paragraph 9 for a whole-of-life asset) the grantor shall recognise and measure the asset in accordance with this [draft] Standard. This recognition is contingent on the asset also meeting the recognition criteria in AASB 116 or AASB 138.
- AASB 116 requires that the cost of an item of property, plant and equipment shall be recognised as an asset if, and only if:
- (a) it is probable that future economic benefits associated with the asset will flow to the entity; and
  - (b) the cost of the item can be measured reliably.
- AASB 138 requires that an intangible asset shall be recognised if, and only if:
- (a) it is probable that the expected future economic benefits that are attributable to the asset will flow to the entity; and
  - (b) the cost of the asset can be measured reliably.
- AG28 Those criteria, together with the specific terms and conditions of the contract, need to be considered in determining whether to recognise the service concession asset during the period in which the asset is constructed or developed. For both property, plant, and equipment and intangible assets, the recognition criteria may be met during the construction or development period, and, if so, the grantor will normally recognise the service concession asset during that period.

- AG29 The first recognition criterion requires the flow of economic benefits to the grantor. According to the *Framework for the Preparation and Presentation of Financial Statements*, as identified in AASB 1048 *Interpretation of Standards*, for not-for-profit entities, future economic benefits are synonymous with the notion of service potential. From the grantor's point of view, the primary purpose of a service concession asset is to provide service potential on behalf of the public sector grantor. Similar to an asset the grantor constructs or develops for its own use, the grantor would assess, at the time the costs of construction or development are incurred, the terms of the contract to determine whether, in addition to retaining control of the land on which the service concession asset is being developed, economic benefits embodied in the service concession asset would flow to the grantor at that time.
- AG30 The second recognition criterion requires that the cost of the asset can be measured reliably. Accordingly, to meet the recognition criteria in AASB 116 or AASB 138, as appropriate, the grantor must have reliable information about the cost of the asset during its construction or development. For example, if the service concession arrangement requires the operator to provide the grantor with progress reports during the asset's construction or development, the costs incurred may be measurable, and would therefore meet the recognition principle in AASB 116 for constructed assets or in AASB 138 for developed assets. Also, where the grantor has little ability to avoid accepting an asset constructed or developed to meet the specifications of the contract, the costs shall be recognised as progress is made towards completion of the asset. Thus, the grantor shall recognise a service concession asset and an associated liability.

### **Measurement of Service Concession Assets**

- AG31 Paragraph 10 requires service concession assets recognised in accordance with paragraph 8 (or paragraph 9 for a whole-of-life asset) to be measured initially at fair value. In particular, fair value is used to determine the cost of a constructed or developed service concession asset or the cost of any upgrades to existing assets, on initial recognition. The requirement in paragraph 10 does not apply to existing assets of the grantor that are reclassified as service concession assets in accordance with paragraph 11 of this [draft] Standard. The use of fair value on initial recognition does not constitute a revaluation under AASB 116 or AASB 138.

### **Types of Compensation**

- AG32 Service concession arrangements are rarely, if ever, the same; technical requirements vary by sector and by jurisdiction. Furthermore, the terms of the arrangement may also depend on the specific features of the overall legal framework, including contract law, of the particular jurisdiction.
- AG33 Depending on the terms of the service concession arrangement, the grantor may compensate the operator for the service concession asset and service provision by any combination of the following:
- (a) making payments (eg cash) to the operator; and
  - (b) compensating the operator by other means, such as:
    - (i) granting the operator the right to earn revenue from third-party users of the service concession asset; or
    - (ii) granting the operator access to another revenue-generating asset for its use.
- AG34 Where the grantor compensates the operator for the service concession asset by making payments to the operator, the asset and service components of the payments may be separable (eg the contract specifies the amount of the predetermined series of payments to be allocated to the service concession asset) or inseparable.

### **Separable Payments**

- AG35 A service concession arrangement may have service and asset components of the payments that may be separable in a variety of circumstances, including, but not limited to, the following:
- (a) part of a payment stream that varies according to the availability of the service concession asset itself and another part that varies according to usage or performance of certain services are identified;
  - (b) different components of the service concession arrangement run for different periods or can be terminated separately. For example, an individual service component can be terminated without affecting the continuation of the rest of the arrangement; or
  - (c) different components of the service concession arrangement can be renegotiated separately. For example, a service component is market tested and some or all of the cost increases or reductions

are passed on to the grantor in such a way that the part of the payment by the grantor that relates specifically to that service can be identified.

- AG36 AASB 116 requires the initial measurement of an asset acquired in an exchange transaction at cost, which is the cash price equivalent of the asset. For exchange transactions, the entry price is considered to be fair value, unless indicated otherwise. Where the asset and service components of payments are separable, the cash price equivalent of the service concession asset is the present value of the service concession asset component of the payments. However, if the present value of the asset portion of the payments is greater than fair value, the service concession asset is initially measured at its fair value. This is consistent with paragraphs 10 and AG24, which require service concession assets recognised in accordance with paragraph 8 (or paragraph 9 for a whole-of-life asset) to be measured initially at fair value, in accordance with AASB 13 Fair Value Measurement.

### **Inseparable Payments**

- AG37 Where the asset and service components of payments by the grantor to the operator are not separable, the fair value specified in paragraph 10 is determined using estimation techniques.
- AG38 For the purpose of applying the requirements of this [draft] Standard, payments and other consideration required by the arrangement are allocated at the inception of the arrangement or upon a reassessment of the arrangement into those for the service concession asset and those for other components of the service concession arrangement (eg maintenance and operation services) on the basis of their relative fair values. The fair value of the service concession asset includes only amounts related to the asset and excludes amounts for other components of the service concession arrangement. In some cases, allocating the payments for the asset from payments for other components of the service concession arrangement will require the grantor to use an estimation technique. For example, a grantor may estimate the payments related to the asset by reference to the fair value of a comparable asset in an agreement that contains no other components, or by estimating the payments for the other components in the service concession arrangement by reference to comparable arrangements and then deducting these payments from the total payments under the arrangement.

### **Operator Receives Other Forms of Compensation**

- AG39 The types of transactions referred to in paragraph 16(b) are non-monetary exchange transactions. Paragraph 24 of AASB 116 and paragraph 45 of AASB 138, as appropriate, provide guidance on these circumstances.
- AG40 When the operator is granted the right to earn revenue from third-party users of the service concession asset, or another revenue-generating asset, or receives non-cash compensation from the grantor, the grantor does not incur a cost directly for acquiring the service concession asset. These forms of consideration to the operator are intended to compensate the operator both for the cost of the service concession asset and for operating it during the term of the service concession arrangement. The grantor therefore needs to initially measure the asset component in a manner consistent with paragraph 10.

### **Fair Value Measurement**

AG40A When determining the fair value of a service concession asset in accordance with AASB 13, an entity shall take into account the following:

- (a) characteristics of the asset;
- (b) unit of account of the asset; and
- (c) valuation techniques used to measure the fair value of the asset.

AG40B In determining the characteristics of the asset, consideration shall be given to any restrictions on the sale or use of the service concession asset. This assessment depends on whether the restriction is deemed to be a characteristic of the asset or a characteristic of the grantor holding the asset. Where a restriction would transfer with the asset in an assumed sale or transfer, such a restriction would generally be deemed a characteristic of the asset and would likely be considered by a market participant in measuring the asset. On the other hand, a restriction that is specific to the grantor and would not transfer with the asset in an assumed sale would not be considered in measuring the fair value of the asset. Whether a restriction is a characteristic of the service concession asset or specific to the grantor will require judgement based on the specific facts and circumstances of the arrangement. Under the grant of the right to the operator model, the right of access provided by the operator does not represent a restriction on the use of the asset, as the control of the asset and therefore the right of use of the asset is retained the grantor.

**Comment [SD12]:**  
**Decision 11:**  
AG40A-AG40E

AG40C The unit of account of the asset reflects its entire useful life, including the remaining useful life of the asset at the end of the term of the arrangement.

AG40D The valuation technique used to measure the fair value of a service concession asset depends on the specific terms and conditions of the service concession arrangement. The appropriate valuation technique to measure the fair value of the service concession asset should reflect the principles of AASB 13, including maximising the relevant observable inputs and minimising the unobservable inputs, consistent with the characteristics for the asset.

AG40E A service concession asset is a specialised asset that is obtained through construction, development, acquisition or upgrade of a service concession asset. The capacity or service potential of the asset is used to achieve public service objectives irrespective of whether the cost of the asset will be recovered by the expected cash flows that the asset may generate. The appropriate valuation technique to initially measure the asset at fair value is the cost approach, being the cost to construct or develop the entire asset. For the:

(a) financial liability model, this cost could be determined by considering the payments that the grantor is contractually obliged to pay the operator in exchange for the asset; and

(b) the grant of the right to the operator model, the current replacement cost.

## Subsequent Measurement

AG41 After initial recognition, a grantor applies AASB 116 or AASB 138 to the subsequent measurement and derecognition of a service concession asset. For the purposes of applying AASB 116 or AASB 138, service concession assets should be treated as a separate class, or classes, of assets. AASB 136 is also applied in considering whether there is any indication that a service concession asset is impaired.

## Recognition and Measurement of Liabilities

AG42 The grantor recognises a liability in accordance with paragraph 13 only when a service concession asset is recognised in accordance with paragraph 8 (or paragraph 9 for a whole-of-life asset). The nature of the liability recognised in accordance with paragraph 13 differs in each of the circumstances described in paragraph AG33 according to its substance. The liability recognised in accordance with paragraph 13 shall be initially measured at the same amount as the service concession asset, being the fair value of the asset in accordance with AASB 13.

## The Financial Liability Model

AG43 When the grantor has a contractual obligation to make a predetermined series of payments to the operator, the liability is a financial liability as defined in AASB 9 Financial Instruments. The grantor has a contractual obligation if it has little, if any, discretion to avoid the obligation usually because the contract with the operator is enforceable by law.

AG44 When the grantor provides compensation to the operator for the cost of the service concession asset and service provision in the form of a predetermined series of payments, an amount reflecting the fair value of the service concession asset is recognised as a liability in accordance with paragraph 13. This liability does not include the finance charge and service components of the payments specified in paragraph 20.

AG45 Where the grantor makes any payments to the operator in advance of the service concession asset being recognised, the grantor accounts for those payments as prepayments.

AG46 The finance charge specified in paragraph 20 is determined based on the rate implicit in the arrangement, based on the operator's cost of capital specific to the service concession asset, if this is practicable to determine.

AG47 If the rate implicit in the arrangement operator's cost of capital specific to the service concession asset is not practicable to determine, the operator's cost of capital rate implicit in the arrangement specific to the service concession asset, the grantor's incremental borrowing rate, or another rate appropriate to the terms and conditions of the arrangement, is used.

AG48 Where sufficient information is not available, the rate used to determine the finance charge may be estimated by reference to the rate that would be expected on acquiring a similar asset (eg a lease of a similar asset, in a similar location and for a similar term). The estimate of the rate should be reviewed together with:

(a) the present value of the payments;

**Comment [SD13]:**  
**Decision 16:**  
Amended AG46-AG47

- (b) the assumed fair value of the asset; and
- (c) the assumed residual value;

to ensure all figures are reasonable and mutually consistent.

- AG49 The finance charge related to the liability in a service concession arrangement is presented consistently with other finance charges in accordance with AASB 101 *Presentation of Financial Instruments* and AASB 123 *Borrowing Costs*.
- AG50 The service component of payments determined in accordance with paragraph 20 is ordinarily recognised as expenses and liabilities as the services are provided.

### Grant of a Right to the Operator Model

- AG51 When the grantor compensates the operator for the service concession asset and service provision by granting the operator the right to earn revenue from third-party users of the service concession asset, the operator is granted the right to earn revenue over the period of the service concession arrangement.
- AG52 Revenue is not recognised immediately. Instead, a liability is recognised for any portion of the revenue that is not yet earned. Revenue is recognised and the liability reduced in accordance with paragraph 24 based on the economic substance of the service concession arrangement, usually as access to the service concession asset is provided to the operator over the term of the service concession arrangement. Paragraph AG33 states that the grantor may compensate the operator by a combination of payments and granting a right to earn revenue directly from third-party users. In cases where the operator's right to earn third-party revenues significantly reduces or eliminates the grantor's predetermined series of payments to the operator, another basis may be more appropriate for reducing the liability (eg the term over which the grantor's future predetermined series of payments are reduced or eliminated).
- AG53 When the grantor compensates the operator for the service concession asset and service by the provision of a revenue-generating asset, other than the service concession asset, revenue is recognised and the liability recognised in accordance with paragraph 23 is reduced in a manner similar to that described in paragraph AG52. In such cases, the grantor also considers the derecognition requirements in AASB 116 or AASB 138, as appropriate.

### Dividing the Arrangement

- AG54 If the operator is compensated for the service concession asset partly by a predetermined series of payments and partly by receiving the right to earn revenue from third-party use of either the service concession asset or another revenue-generating asset, it is necessary to account separately for each portion of the liability related to the grantor's consideration. In these circumstances, the consideration to the operator is divided into a financial liability portion for the predetermined series of payments and a liability portion for the right granted to the operator to earn revenue from third-party use of the service concession asset or another revenue-generating asset. Each portion of the liability is recognised initially at the fair value of the consideration paid or payable.

AG54A The arrangement in paragraph AG54 is commonly referred to as a hybrid arrangement. Consistent with paragraph 14, the liability recognised for a hybrid arrangement is initially measured at the same amount as the fair value of the service concession asset. The amount allocated in the hybrid arrangement is as follows:

- (a) where the fair value of the portion of the service concession asset that is related to the grant of the right to the operator model can be reliably determined, an acceptable method of dividing the hybrid arrangement is to allocate this amount to the grant of the right to the operator model in the first instance, with the remainder of the portion of the fair value of the service concession asset to be allocated to the amount recognised under the financial liability model; or
- (b) where the grantor's contractual obligation to make a pre-determined series of payments to the operator in exchange for the service concession asset can be reliably determined, an acceptable method of dividing the hybrid arrangement is to allocate this amount to the financial liability model, with the remaining amount of the fair value of the service concession asset to be allocated to the amount recognised under the grant of the right to the operator model.

**Comment [SD14]:**  
Decision 17:  
AG54A

## Other Liabilities, Commitments, Contingent Liabilities and Contingent Assets

---

- AG55 Service concession arrangements may include various forms of financial guarantees (eg a guarantee, security, or indemnity related to the debt incurred by the operator to finance construction, development, acquisition, or upgrade of a service concession asset), or performance guarantees (eg guarantee of minimum revenue streams, including compensation for shortfalls).
- AG56 Certain guarantees made by a grantor may meet the definition of a financial guarantee contract. The grantor determines whether guarantees made by the grantor as part of a service concession arrangement meet the definition of a financial guarantee contract and applies AASB 7 *Financial Instruments: Disclosures*, AASB 9 and AASB 132 *Financial Instruments: Presentation* in accounting for the guarantee. Where the guarantee is an insurance contract, the grantor can elect to apply AASB 4 *Insurance Contracts* or AASB 1023 *General Insurance Contracts* instead.
- AG57 Guarantees and commitments that do not meet the requirements in AASB 9 and AASB 132 relating to financial guarantee contracts and are not insurance contracts are accounted for in accordance with AASB 137 *Financial Instruments: Recognition and Measurement*.
- AG58 Contingent assets or liabilities may arise from disputes over the terms of the service concession arrangement. Such contingencies are accounted for in accordance with AASB 137.

## Presentation and Disclosure

---

- AG59 Disclosures relating to various aspects of service concession arrangements may be addressed in existing Standards. This [draft] Standard addresses only the additional disclosures relating to service concession arrangements. Where the accounting for a particular aspect of a service concession arrangement is addressed in another Standard, the grantor follows the disclosure requirements of that Standard in addition to those set out in paragraph 31.
- AG60 AASB 101 requires finance costs to be presented separately in the statement of profit and loss and other comprehensive income. The finance charge determined in accordance with paragraph 20 is included in this item.
- AG61 In addition to the disclosures outlined in paragraphs 31 and 32, the grantor also applies the relevant presentation and disclosure requirements in other Australian Accounting Standards as they pertain to assets, liabilities, revenues, and expenses recognised under this [draft] Standard.

## Transition

---

- AG62 A grantor may elect under paragraph 33(b) to recognise and measure service concession assets and related liabilities prospectively, using deemed cost. Deemed cost is determined at the beginning of the earliest period for which comparative information is presented in the financial statements.
- AG63 The deemed cost for service concession assets is the fair value in accordance with AASB 13.

### Use of Deemed Cost under the Financial Liability Model

- AG64 Where the grantor uses deemed cost under the financial liability model, it measures:
- the service concession asset at fair value (see paragraph 10); and
  - the financial liability using the remaining contractual cash flows specified in the contract and the rate described in paragraphs AG43 – AG50 at the beginning of the earliest period for which comparative information is presented in the financial statements.
- Any difference between the value of the asset and the financial liability is recognised directly in net assets/equity. If the entity chooses as its accounting policy the revaluation model in AASB 116 or AASB 138, this difference is included in equity.

### Use of Deemed Cost under the Grant of a Right to the Operator Model

- AG65 Where the grantor uses deemed cost under the grant of a right to the operator model, it measures:

- (a) the service concession asset at fair value (see paragraph 10); and
- (b) the liability representing the unearned portion of any revenue arising from the receipt of the service concession asset. This amount should be determined as the fair value of the asset less any financial liabilities, adjusted to reflect the remaining period of the service concession arrangement.

## Implementation Guidance

This guidance accompanies, but is not part of, AASB 10XY.

IG1 The purpose of this Implementation Guidance is to illustrate certain aspects of the requirements of AASB 10XY.

## Accounting Framework for Service Concession Arrangements

IG2 The diagram below summarises the accounting for service concession arrangements established by AASB 10XY.

**Comment [SD15]:**

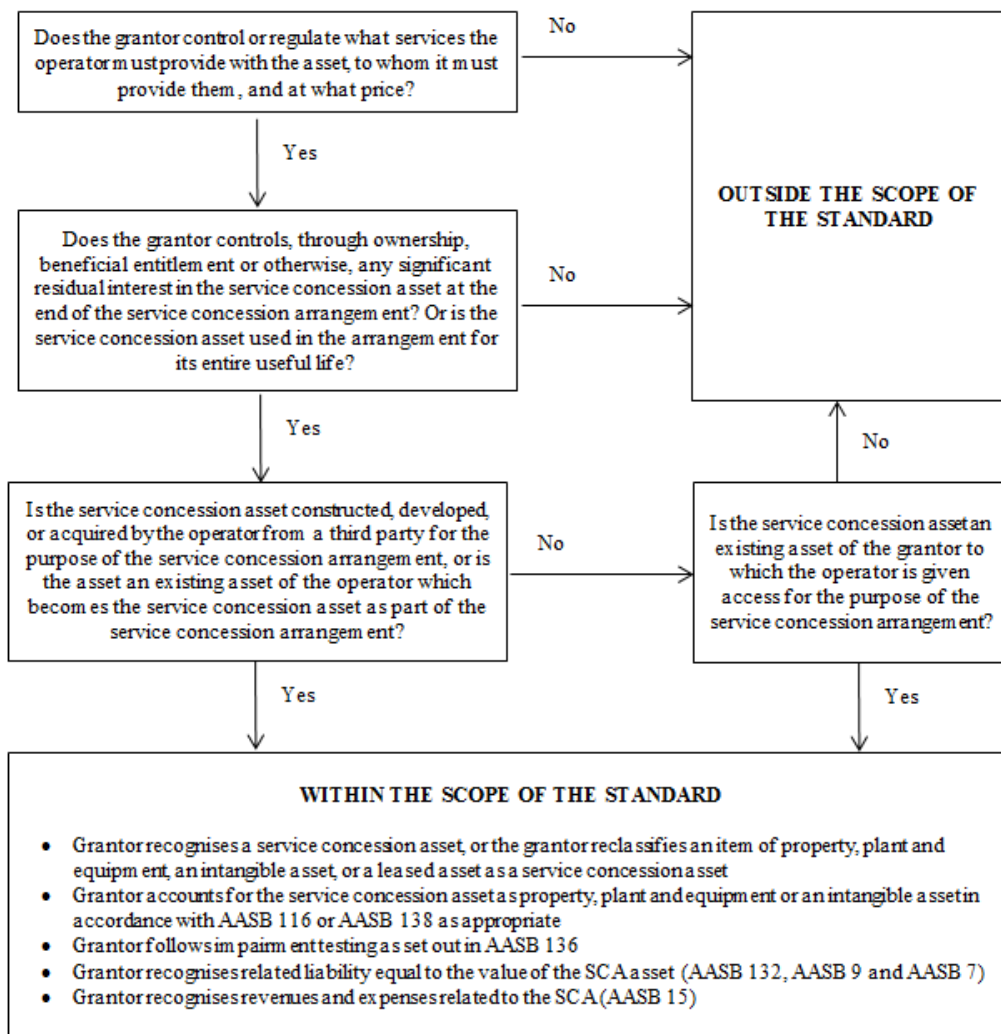

**Note to the Board:**

- The Implementation Guidance is adopted from IPSAS 32.
- This section does not contain track changes for ease of readability.

**Comment [SD16]:**

**Decision 2:**

Flow chart – Adopted from IPSAS 32 Implementation Guidance with changes to the references to Australian Accounting Standards.

## References to Australian Accounting Standards that Apply to Typical Types of Arrangements Involving an Asset Combined with Provision of a Service

**Comment [SD17]:**  
**Decisions 4 and 7:**  
 Table – Adopted from IPSAS 32 Implementation Guidance.

IG3 The table sets out the typical types of arrangements for private sector participation in the provision of public sector services and provides references to Accounting Standards that may apply to those arrangements. The list of arrangement types is not exhaustive. The purpose of the table is to highlight the continuum of arrangements. It is not the AASB’s intention to convey the impression that bright lines exist between the accounting requirements for various types of arrangements.

IG4 Shaded text shows arrangements within the scope of AASB 10XY.

Category	Lessee	Service provider			Owner	
		Service and/or maintenance contract (specific tasks e.g. debt collection, facility management)	Rehabilitate-operate-transfer	Build-operate-transfer	Build-own-operate	100% Divestment/Privatisation/Corporation
Typical arrangement types	Lease (e.g. operator leases asset from grantor)					
Asset ownership	Grantor			Operator		
Capital investment	Grantor			Operator		
Demand risk	Shared	Grantor	Grantor and/or Operator		Operator	
Typical duration	8–20 years	1–5 years	25-30 years		Indefinite (or may be limited by contract or licence)	
Significant residual interest	Grantor			Operator		
Relevant Accounting Standards	AASB 117	AASB 101	This Standard/ AASB 116/ AASB 138		AASB 116/ AASB 138 (derecognition)	

**Comment [SD18]:**  
 Use of the term ‘contract’ instead of the term ‘binding arrangement’ in IPSAS 32.

**Comment [SD19]:**  
 Use of Australian Accounting Standards references instead of IPSAS references in IPSAS 32.

## Illustrative examples

*These illustrative examples accompany, but are not part of, AASB 10XY.*

IE1 These examples consider only three of many possible types of service concession arrangements. Their purpose is to illustrate the accounting treatment for some features that are commonly found in practice. To make the illustrations as clear as possible, it has been assumed that the term of the service concession arrangement is only ten years and that the operator's annual receipts are constant over that period. In practice, terms may be much longer and annual revenues may increase over time.

### Comment [SD20]:

#### Note to the Board:

The Board did not make any decisions on the Illustrative examples. Accordingly there are no changes in this part of the draft Standard for the June 2016 Board meeting.

## Arrangement Terms (Common to All Three Examples)

IE2 In these examples, monetary amounts are denominated in 'currency units' (CU).

IE3 These terms are common to the three examples that follow:

IE4 The terms of the arrangement require an operator to construct a road – completing construction within two years—and maintain and operate the road to a specified standard for eight years (ie years 3–10). The arrangement is within the scope of this [draft] Standard and the road meets the conditions for recognition of a service concession asset in paragraph 8 (or paragraph 9 for a whole-of-life asset).

IE5 The terms of the arrangement also require the operator to resurface the road when the original surface has deteriorated below a specified condition. The operator estimates that it will have to undertake the resurfacing at the end of year 8 at a fair value of CU110. The compensation to the operator for this service is included in the predetermined series of payments and/or the revenue the operator has the right to earn from the service concession asset or another revenue-generating asset granted to the operator by the grantor.

IE6 It is assumed that the original road surface is a separate component of the service concession asset and meets the criteria for recognition specified in AASB 116 when the service concession asset is initially recognised. It is further assumed that there is sufficient certainty regarding the timing and amount of the resurfacing work for it to be recognised as a separate component when the resurfacing occurs.<sup>2</sup> It is assumed that the expected cost of the resurfacing can be used to estimate the initial cost of the surface layers recognised as a separate component of the service concession asset. The road surface is therefore recognised as a separate component of the initial fair value of the service concession asset and measured at the estimated fair value of the resurfacing and depreciated over years 3–8. This depreciation period is shorter than that for the road base, and takes into account that resurfacing would ordinarily occur over six years, rather than 25 years. During the construction phase, it is assumed that only the road base is constructed in year 1, and that the road only becomes ready to use at the end of year 2.

IE7 Recognition of the replacement component of the road surface as a separate component of the service concession asset in year 8 also results in an increase in the liability recognised by the grantor. Where the liability relates to the grant of a right to the operator model, additional revenue in respect of this increase is recognised evenly over the term of the arrangement. However, if the expenditure represented an improvement in service potential such as a new traffic lane rather than restoration to original service capability then it would be appropriate to instead recognise revenue relevant to that improvement only once it has occurred.

IE8 At the beginning of year 3, the total fair value of the road is CU1,050, comprised of CU940 related to the construction of the base layers and CU110 related to construction of the surface layers. The fair value of the surface layers is used to estimate the fair value of the resurfacing (which is treated as a replacement component in accordance with AASB 116). The estimated life of surface layers (ie, six years) is also used to estimate the depreciation of the replacement component in years 9 and 10. The total initial fair value of the road is lower than the present value of the series of predetermined payments pertaining to the asset, where applicable.

IE9 The road base has an economic life of 25 years. Annual depreciation is taken by the grantor on a straight-line basis. It is therefore CU38 (CU940/25) for the base layers. The surface layers are depreciated over 6 years (years 3–8 for the original component, and starting in year 9 for the replacement component). Annual depreciation related to the surface layers is CU18 (CU110/6). There is no impairment in the value of the road over the term of the service concession arrangement.

<sup>2</sup> If this was not the case (eg where the operator might resurface in future, or might incur additional maintenance over the period of the service concession arrangement), it might not be appropriate to recognise a component.

- IE10 The operator's cost of capital is not practicable to determine. The rate implicit in the service concession arrangement specific to the asset is 6.18 per cent.
- IE11 It is assumed that all cash flows take place at the end of the year.
- IE12 It is assumed that the time value of money is not significant.
- IE13 At the end of year 10, the arrangement will end. At the end of the arrangement, the operator will transfer the operation of the road to the grantor.
- IE14 The total compensation to the operator under each of the three examples is inclusive of each of the components of the service concession arrangement and reflects the fair values for each of the services, which are set out in Table 1.
- IE15 The grantor's accounting policy for property, plant, and equipment is to recognise such assets using the revaluation model specified in AASB 116. It is assumed that there are no changes in the fair value of the service concession assets during the service concession arrangement.

**Table 1: Fair Values of the Components of the Arrangement (Currency Units)**

<b>Contact Component</b>	<b>Fair Value</b>
Road – base layers	940
Road – original surface layers	110
Total fair value of road	1,050
Annual service component	12
Effective interest rate	6.18%

## Example 1: The Grantor makes a Predetermined Series of Payments to the Operator

### Additional Terms

- IE16 The terms of the arrangement require the grantor to pay the operator CU200 per year in years 3–10 for making the road available to the public. The total consideration (payment of CU200 in each of years 3–10) reflects the fair values for each of the services indicated in Table 1. These payments are intended to cover the cost of constructing the road, annual operating costs of CU12 and reimbursement to the operator for the cost of resurfacing the road in year 8 of CU110.

### Financial Statement Impact

- IE17 The grantor initially recognises the service concession asset as property, plant, and equipment at its fair value (total CU1,050, comprised of CU940 related to construction of the base layers and CU110 related to construction of the original surface layers). The asset is recognised as it is constructed (CU525 in year 1 and CU525 in year 2). Depreciation is taken annually (CU56, comprised of CU38 for the base layers and CU18 for the surface layers), starting from year 3.
- IE18 The grantor initially recognises a financial liability at fair value equal to the fair value of the asset under construction at the end of year 1 (CU525). The liability is increased at the end of year 2 to reflect both the fair value of the additional construction (CU525) and the finance charge on the outstanding financial liability. Because the amount of the predetermined payment related to the service component of the service concession arrangement is known, the grantor is able to determine the amount of the payment that reduces the liability. A finance charge at the implicit rate of 6.18 per cent is recognised annually. The liability is subsequently measured at amortised cost, that is, the amount initially recognised plus the finance charge on that amount calculated using the effective interest method minus repayments.
- IE19 The compensation for the road resurfacing is included in the predetermined series of payments. There is no direct cash flow impact related to the road resurfacing; however, the grantor recognises the resurfacing as an asset when the work is undertaken and recognises depreciation expense of CU110/6 = CU18, beginning in year 9.
- IE20 The compensation for maintenance and operating the road (CU12) is included in the predetermined series of payments. There is no cash flow impact related to this service expense; however, the grantor recognises an expense annually.
- IE21 The costs of services are accounted for in accordance with AASB 101

### Overview of Cash Flows, Statement of Profit and Loss and Other Comprehensive Income, and Statement of Financial Position

- IE22 The grantor's cash flows, statement of profit and loss and other comprehensive income, and statement of financial position over the duration of the arrangement will be as illustrated in Tables 1.1 to 1.3. In addition, Table 1.4 shows the changes in the financial liability.

**Table 1.1 Cash Flows (Currency Units)**

Year	1	2	3	4	5	6	7	8	9	10	Total
Predetermined series of payments	–	–	(200)	(200)	(200)	(200)	(200)	(200)	(200)	(200)	(1,600)
Net inflow/(outflow)	–	–	(200)	(200)	(200)	(200)	(200)	(200)	(200)	(200)	(1,600)

**Table 1.2 Statement of Profit and Loss and Other Comprehensive Income (Currency Units)**

Year	1	2	3	4	5	6	7	8	9	10	Total
Service expense	-	-	(12)	(12)	(12)	(12)	(12)	(12)	(12)	(12)	(96)
Finance charge	-	(32)	(67)	(59)	(51)	(43)	(34)	(25)	(22)	(11)	(344)
Depreciation – base layers	-	-	(38)	(38)	(38)	(38)	(38)	(38)	(38)	(38)	(304)
Depreciation – original surface layer	-	-	(18)	(19)	(18)	(18)	(19)	(18)	-	-	(110)
Depreciation – replacement surface layer	-	-	-	-	-	-	-	-	(18)	(19)	(37)
Total depreciation	-	-	(56)	(57)	(56)	(56)	(57)	(56)	(56)	(57)	(451)
Annual surplus/ (deficit)	-	(32)	(135)	(128)	(119)	(111)	(103)	(93)	(90)	(80)	(891)

**NOTES:**

- Depreciation in years 3–8 reflects the depreciation on the initially-constructed road surface. It is fully depreciated over that period. Depreciation in years 9–10 reflects the depreciation on the new service concession asset component (surface) recognised in year 8.
- Although these Illustrative Examples use a straight-line depreciation method, it is not intended that this method be used in all cases. Paragraph 60 of AASB 116 requires that, “The depreciation method used shall reflect the pattern in which the asset’s future economic benefits are expected to be consumed by the entity.” Likewise, for intangible assets, paragraph 97 of AASB 138 requires that, “The depreciable amount of an intangible asset with a finite useful life shall be allocated on a systematic basis over its useful life...”

**Table 1.3 Statement of Financial Position (Currency Units)**

Year	1	2	3	4	5	6	7	8	9	10
Service concession asset – base layers	525	940	902	864	826	788	750	712	674	636
Service concession asset – original surface layer	-	110	92	73	55	37	18	-	-	-
Service concession asset – replacement surface layer	-	-	-	-	-	-	-	110	92	73
Total service concession asset	525	1,050	994	937	881	825	768	822	766	709
Cash	-	-	(200)	(400)	(600)	(800)	(1,000)	(1,200)	(1,400)	(1,600)
Financial liability	(525)	(1,082)	(961)	(832)	(695)	(550)	(396)	(343)	(177)	-
Cumulative surplus/ (deficit)	-	32	167	295	414	525	628	721	811	891

**NOTES:**

- In this example, the resurfacing occurs as expected in year 8, when the initially-constructed road surface is fully depreciated. If the resurfacing occurred earlier, the initially-constructed road surface would not be fully depreciated, and would need to be derecognised in accordance with AASB 116 before the new component of the service concession asset related to the resurfacing is recognised.
- The new component of the service concession asset related to the resurfacing is recognised in year 8. Years 9–10 reflect depreciation on this additional component (Table 1.2).
- The financial liability is increased in year 8 for the recognition of the new component of the service concession asset.

**Table 1.4 Changes in Financial Liability (Currency Units)**

## Example 2: The Grantor Gives the Operator the Right to Charge Users a Toll for Use of the Road

### Additional Arrangement Terms

IE23 The terms of the arrangement allow the operator to collect tolls from drivers using the road. The operator forecasts that vehicle numbers will remain constant over the duration of the arrangement and that it will receive tolls of CU200 in each of years 3–10. The total consideration (tolls of CU200 in each of years 3–10) reflects the fair values for each of the services indicated in Table 1, and is intended to cover the cost of constructing the road, annual operating costs of CU12 and reimbursement to the operator for the cost of resurfacing the road in year 8 of CU110.

### Financial Statement Impact

- IE24 The grantor initially recognises the service concession asset as property, plant, and equipment at its fair value (total CU1,050, comprised of CU940 related to construction of the base layers and CU110 related to construction of the original surface layers). The asset is recognised as it is constructed (CU525 in year 1 and CU525 in year 2). Depreciation is recognised annually (CU56, comprised of CU38 for the base layers and CU18 for the surface layers, starting in year 3).
- IE25 As consideration for the service concession asset, the grantor recognises a liability under the grant of a right to the operator model for granting the operator the right to collect tolls of CU200 in years 3 – 10. The liability is recognised as the asset is recognised.
- IE26 The liability is reduced over years 3–10, and the grantor recognises revenue on that basis because access to the service concession asset is expected to be provided evenly over the term of the service concession arrangement from the point at which the asset is capable of providing economic benefits.
- IE27 The compensation for the road resurfacing is included in the tolls the operator expects to earn over the term of the service concession arrangement. There is no direct cash flow impact related to the road resurfacing; however, the grantor recognises the resurfacing as an asset when the work is undertaken and recognises depreciation expense of  $CU110/6 = CU18$ , beginning in year 9.
- IE28 The compensation for maintenance and operating the road (CU12) is included in the tolls the operator expects to earn over the term of the service concession arrangement. There is no financial statement impact related to this service expense. It does not affect cash flow because the grantor has no cash outflow. It is not recognised as an operating expense because the fair value of the asset and liability initially recognised do not include any service costs the operator may incur.

### Overview of Cash Flows, Statement of Profit or Loss and Other Comprehensive Income, and Statement of Financial Position

IE29 The grantor's cash flows, Statement of Profit and Loss and Other Comprehensive Income, and Statement of Financial Position over the duration of the arrangement will be as illustrated in Tables 2.1 to 2.2. In addition, Table 2.3 shows the changes in the liability.

IE30 Because there are no payments made to the operator, there are no cash flow impacts for this example.

**Table 2.1 Statement of Profit and Loss and Other Comprehensive Income (Currency Units)**

Year	1	2	3	4	5	6	7	8	9	10	Total
Revenue (reduction of liability)	-	-	145	145	145	145	145	145	145	145	1,160
Depreciation – base layers	-	-	(38)	(38)	(38)	(38)	(38)	(38)	(38)	(38)	(304)
Depreciation – original surface layer	-	-	(18)	(19)	(18)	(18)	(19)	(18)	-	-	(110)
Depreciation – replacement surface layer	-	-	-	-	-	-	-	-	(18)	(19)	(37)
Total depreciation	-	-	(56)	(57)	(56)	(56)	(57)	(56)	(56)	(57)	(451)
Annual surplus/(deficit)	-	-	89	88	89	89	88	89	89	88	709
<b>NOTES:</b>											
1. Depreciation in years 3–8 reflects the depreciation on the initially-constructed road surface. It is fully depreciated over that period.											
2. Depreciation in years 9–10 reflects the depreciation on the new service concession asset component (surface) recognised in year 8.											
3. The revenue (reduction of the liability) includes revenue from the additional liability (Table 2.2).											
4. All revenue is recognised evenly over the term of the arrangement.											

**Table 2.2 Statement of Financial Position (Currency Units)**

Year	1	2	3	4	5	6	7	8	9	10
Service concession asset – base layers	525	940	902	864	826	788	750	712	674	636
Service concession asset – original surface layer	–	110	92	73	55	37	18	–	–	–
Service concession asset – replacement surface layer	–	–	–	–	–	–	–	110	92	73

### Example 3: The Grantor Makes a Predetermined Series of Payments to the Operator and Also Grants the Operator the Right to Charge Users a Toll for Use of the Road

#### Additional Arrangement Terms

IE31 The terms of the arrangement allow the operator to collect tolls from drivers using the road. The operator forecasts that vehicle numbers will remain constant over the duration of the arrangement and that it will receive tolls of CU100 in each of years 3–10. The arrangement also requires the grantor to make a predetermined series of payments to the operator of CU100 annually. The fair value of the right to collect tolls and the predetermined series of payments are considered to compensate the operator equally (ie 50 per cent from each form of compensation to the operator).

## Financial Statement Impact

- IE32 The grantor initially recognises the service concession asset as property, plant, and equipment at its fair value (total CU1,050, comprised of CU940 related to construction of the base layers and CU110 related to construction of the original surface layers). The asset is recognised as it is constructed (CU525 in year 1 and CU525 in year 2). Depreciation is taken annually (CU56, comprised of CU38 for the base layers and CU18 for the surface layers).
- IE33 As consideration for the service concession asset, the grantor recognises both a liability under the grant of a right to the operator model by granting the operator the right to collect tolls of CU100 in years 3–10, and a financial liability to make payments of CU100 in years 3–10. A liability and a financial liability are recognised as the asset is recognised at the end of year 1 (CU525). The liability and financial liability are increased at the end of year 2 to reflect both the fair value of the additional construction (CU525) and the finance charge on the outstanding financial liability.
- IE34 The grantor’s obligation related to the right granted to the operator to charge tolls and the predetermined payments are regarded as two separate items. Therefore in this arrangement it is necessary to divide the grantor’s consideration to the operator into two parts—a liability and a financial liability.
- IE35 The liability of CU525 (recognised evenly at the end of years 1 and 2) is reduced over years 3–10, and the grantor recognises revenue on the same basis because the tolls are expected to be earned evenly over the term of the service concession arrangement from the point at which the asset is capable of providing service benefits.
- IE36 The grantor initially recognises a financial liability at fair value equal to half of the fair value of the asset (CU525), recognised evenly at the end of years 1 and 2; a liability under the grant of a right to the operator model is recognised in an amount equal to the other half of the fair value of the asset. The financial liability is also increased at the end of year 2 by the finance charge on the outstanding financial liability. Because the amount of the predetermined payments related to the service component of the service concession arrangement is known, the grantor is able to determine the amount of the payments that reduces the liability. A finance charge at the implicit rate of 6.18 per cent is recognised annually. The liability is subsequently measured at amortized cost, ie the amount initially recognised plus the finance charge on that amount calculated using the effective interest method minus repayments.
- IE37 The operator is compensated for the road resurfacing (CU110) equally through the tolls the operator expects to earn over the term of the service concession arrangement and the series of predetermined payments (ie 50 per cent from each). There is no direct cash flow impact related to the road resurfacing; however, the grantor recognises the resurfacing as an asset when the work is undertaken and recognises depreciation expense of  $CU110/6 = CU18$ , beginning in year 9.
- IE38 The operator is compensated for maintenance and operating the road (CU12) equally through the tolls the operator expects to earn over the term of the service concession arrangement and the predetermined payment (ie 50 per cent from each). There is no direct cash flow impact related to this service expense because the grantor has no cash outflow. However, the grantor recognises an expense annually for the portion of the compensation related to the series of predetermined payments (CU6). There is no financial statement impact for the remaining CU6 of this service expense. It is not recognised as an operating expense because the fair value of the asset and liability initially recognised do not include any service costs the operator may incur.
- IE39 The grantor’s cash flows, statement of financial performance, and statement of financial position over the duration of the arrangement will be as illustrated in Tables 3.1 to 3.3. In addition, Table 3.4 shows the changes in the liability and Table 3.5 shows the changes in the financial liability.

## Overview of Cash Flows, Statement of Profit and Loss and Other Comprehensive Income, and Statement of Financial Position

**Table 3.1 Cash Flows (Currency Units)**

Year	1	2	3	4	5	6	7	8	9	10	Total
Predetermined series of payments	–	–	(100)	(100)	(100)	(100)	(100)	(100)	(100)	(100)	(800)
Net inflow/ (outflow)	–	–	(100)	(100)	(100)	(100)	(100)	(100)	(100)	(100)	(800)

**Table 3.2 Statement of Profit and Loss and Other Comprehensive Income (Currency Units)**

Year	1	2	3	4	5	6	7	8	9	10	Total
Revenue (reduction of liability)	–	–	73	72	73	72	73	72	73	72	580
Service expense	–	–	(6)	(6)	(6)	(6)	(6)	(6)	(6)	(6)	(48)
Finance charge	–	(16)	(33)	(30)	(26)	(22)	(17)	(12)	(11)	(5)	(172)
Depreciation – base layers	–	–	(38)	(38)	(38)	(38)	(38)	(38)	(38)	(38)	(304)
Depreciation – original surface layer	–	–	(18)	(19)	(18)	(18)	(19)	(18)	–	–	(110)
Depreciation – replacement surface layer	–	–	–	–	–	–	–	–	(18)	(19)	(37)
Total depreciation	–	–	(56)	(57)	(56)	(56)	(57)	(56)	(56)	(57)	(451)
Annual surplus/(deficit)	–	(16)	(22)	(21)	(15)	(12)	(7)	(2)	–	4	(91)

**NOTES:**

1. Depreciation in years 3–8 reflects the depreciation on the initially-constructed road surface. It is fully depreciated over that period.
2. Depreciation in years 9–10 reflects the depreciation on the new service concession asset component (surface) recognised in year 8.
3. The revenue (reduction of the liability) includes revenue from the additional liability (Table 3.3).
4. All revenue is recognised evenly over the term of the arrangement.

**Table 3.3 Statement of Financial Position (Currency Units)**

Year	1	2	3	4	5	6	7	8	9	10
Service concession asset – base layers	525	940	902	864	826	788	750	712	674	636
Service concession asset – surface layer	–	110	92	73	55	37	18	–	–	–
Service concession asset – replacement surface layer	–	–	–	–	–	–	–	110	92	73
Total service concession asset	525	1,050	994	937	881	825	768	822	766	709
Cash	–	–	(100)	(200)	(300)	(400)	(500)	(600)	(700)	(800)
Liability	(262)	(525)	(452)	(380)	(307)	(235)	(162)	(145)	(72)	–
Financial liability	(263)	(541)	(480)	(416)	(348)	(276)	(199)	(172)	(89)	–
Cumulative surplus/(deficit)	–	16	38	59	74	86	93	95	95	91

**NOTES:**

1. In this example, the resurfacing occurs as expected in year 8, when the initially-constructed road surface is fully depreciated. If the resurfacing occurred earlier, the initially-constructed road surface would not be fully depreciated, and would need to be derecognised in accordance with AASB 116 before the new component of the service concession asset related to the resurfacing is recognised.
2. The new component of the service concession asset related to the resurfacing is recognised in year 8. Years 9–10 reflect depreciation on this additional component (Table 3.2).
3. The liability is increased in year 8 for the recognition of 50 per cent of the new component of the service concession asset.
4. The financial liability is increased in year 8 for the recognition of 50 per cent of the new component of the service concession asset.

## Basis for Conclusions

*This Basis for Conclusions accompanies, but is not part of, AASB 10XY.*

### Background

---

- BC1 This Basis for Conclusions summarises the Australian Accounting Standards Board's considerations in reaching the conclusions in the Exposure Draft. Individual Board members gave greater weight to some factors than to others.
- BC2 In Australia, public sector entities enter into service concession arrangements as a means of developing and delivering infrastructure for public services such as roads, bridges, tunnels, prisons, hospitals, airports, water distribution facilities, energy supply, telecommunication networks and permanent installations for military and other operations. AASB Interpretation 12 *Service Concession Arrangements* (which incorporates IFRIC 12 *Service Concession Arrangements*) provides the accounting requirements for service concession arrangements by the operator of a service concession arrangement. AASB Interpretation 12 does not apply to a grantor. The International Public Sector Accounting Standards Board published IPSAS 32 *Service Concession Arrangements: Grantor* in October 2011. IPSAS 32 prescribes the accounting for service concession assets, liabilities, revenues and expenses by grantors. IPSAS 32 was developed to mirror IFRIC 12 in most aspects.
- BC3 After considering a range of alternatives, the Board decided to develop an Australian Accounting Standard on grantor accounting for service concession arrangements, based on IPSAS 32, to address the lack of guidance in Australian Accounting Standards for accounting for service concession arrangements from the grantor perspective.

### Significant Issues

---

#### Scope

- BC4 The Board considered various arrangements involving public and private sector entities and concluded that the scope of IPSAS 32 is an appropriate basis for this [draft] Standard. The Board noted that this approach would require both the operator and the grantor of a service concession arrangement to apply the same principles in determining which party should recognise the asset in the arrangement. The Board considered that this approach would reduce the possibility of an asset being recognised by both parties, or by neither party to the arrangement.
- BC5 The Board also considered the types of public sector entities that should apply the proposed [draft] Standard. The Board deliberated on whether to adopt the IPSAS 32 application to all public sector entities other than a Government Business Enterprise (GBE). A GBE is akin to a for-profit public sector entity.
- BC6 The Board decided that the Exposure Draft should:
- (a) propose the application to all public sector entities, rather than being limited to not-for-profit public sector entities. This approach is consistent with the AASB policy of making Australian Accounting Standards with a view to requiring like transactions and events to be accounted for in a like manner for all types of entities, referred to as 'transaction neutrality'. The Board noted that this scope is wider than that of IPSAS 32 as International Public Sector Accounting Standards do not apply to Government Business Enterprises;
  - (b) seek comments from its constituents on whether they agree with the proposed application to all public sector entities.

#### Terminology

- BC7 IPSAS 32 is expressed in jurisdiction-neutral language. The Board considered that some of the terminology in IPSAS 32 does not readily translate to the Australian environment and decided that amendments to certain terms and phrases would be necessary for entities applying Australian Accounting Standards. For example, consistent with the terminology used in other Australian Accounting Standards, the [draft] Standard adopts the term 'contract' rather than the term 'binding arrangement' as used in IPSAS 32.

## Recognition of a Service Concession Asset

- BC8 The Board considered a number of alternative approaches in developing the proposed guidance for assessing whether a grantor controls the service concession asset, including:
- (a) the risks and rewards approach;
  - (b) the rights and obligations approach;
  - (c) the control or regulation approach (the IPSAS 32 concept of control); and
  - (d) an approach analogous to the principles of control specified in AASB 10 *Consolidated Financial Statements*.
- BC9 The Board decided to adopt the IPSAS 32 concept of control (control or regulation approach) for the following reasons.
- BC10 In considering the merits of the risks and rewards and the control-based approach to assess whether the grantor should recognise the asset, the Board noted that the risks and rewards approach focuses on the economic aspects of the terms and conditions in the arrangement. The Board did not consider this focus to be appropriate for service concession arrangements in the Australian public sector. This is because the primary purpose of a service concession asset, from the grantor's point of view, is to provide specified public services on behalf of the grantor using the asset, and not to provide economic benefits such as revenue generated by such assets (eg from user fees). Thus, the service potential of the asset accrues to the grantor. The Board's view is that economic benefits are only likely to arise from a service concession arrangement, from a grantor's perspective, in circumstances where the operator is granted the right to earn revenue from third-party users of either the service concession asset or another revenue-generating asset. A control-based approach focuses on control over the service potential of the service concession asset.
- BC11 Service concession arrangements are often entered into to share the risks between the grantor and the operator. The Board questioned whether objective criteria can be established for assessing risks and rewards to enable consistent results to be determined. In addition, weighting of various risks and rewards was seen to be problematic. The Board concluded, therefore, that the risks and rewards approach was not appropriate for an Australian Standard addressing grantor accounting for service concession arrangements.
- BC12 In considering the rights and obligations approach, the Board noted that while this could have conceptual merit, it would represent a significant change in the accounting and financial reporting of assets and liabilities for public sector entities that could have implications beyond service concession arrangements, and could set an inappropriate precedent.
- BC13 While there was some discussion as to the ability to apply the concept of control in AASB 10 by analogous interpretation, the Board agreed that the assessment of control for an entity may not, in certain circumstances, be appropriate when applying the principles to an individual asset.
- BC14 The Board concluded that the IPSAS 32 approach (the control or regulation approach) was the most appropriate approach as it is consistent with AASB Interpretation 12. Accordingly, this approach would lead to consistent accounting requirements for the operator and grantor.
- BC15 Additionally, the control approach in IPSAS 32 is confirmed in the Basis for Conclusions to IPSAS *The Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities* (October 2014), where the IPSASB concluded that consideration of "the risks and rewards associated with particular transactions and events, and which party to any transaction or event bears the majority of those risks and rewards, may be relevant and useful in identifying the nature of the asset controlled by parties to the transaction or event. It may also be useful in determining how to quantify and associate the economic rights and obligations with particular parties. However, it is not of itself an indicator of the party that controls an asset. The IPSASB therefore decided not to include the risks and rewards of ownership as an indicator of control" (BC5.14).

BC15A The Board in developing the application guidance for the control concept formed the view that there are three main circumstances which a grantor controls or regulates the price, services and/or to whom the services must be provided in accordance with paragraph 8(a). The three main circumstances are where in the service concession arrangement, the contract:

- (a) contract specifies that the grantor controls or regulates the price, services and/or to whom the services must be provided;
- (b) contract specifies that a third-party regulator regulates the price, services and/or to whom the services must be provided – under this circumstance, the regulation by the third-party regulator removes the ability of the operator to set or regulate the price, services and/or to whom the services must be provided and the regulation is considered to be implicitly set by the grantor.

**Comment [SD21]:**  
**Decision 6:**  
BC15A

Additionally, it is not essential for the grantor to direct the activities of the third-party regulator for the grantor to have control over the service concession arrangements (paragraph AG12); and

- (c) ~~contract~~ does not specify that a third-party regulator sets or regulates the price, services and/or to whom the services must be provided – under these circumstances, many governments have the power to regulate the behaviour of entities operating in certain sectors of the economy, either directly or through specifically created agencies. For the purpose of paragraph 8(a), such broad regulatory powers do not constitute control without a specific arrangement or contract (paragraph AG13). Instead the grantor, operating under such a regulatory framework derives control of the service concession asset either from the contract or the specific regulation applicable to the industry or service. However, where a service concession arrangement does not clearly fall within an existing regulatory framework (eg where there is more than one possible source of regulation), the arrangement will need to incorporate the specific regulatory framework that stipulates the use, the users and/or the pricing to be charged for the services in order for the grantor to have control of the service concession asset (paragraph AG14).

BC16 The Board further decided that implementation guidance be included within the [draft] Standard to assist users in assessing whether the service concession asset is controlled by the grantor.

BC17 The Board also considered the concept of control for the recognition of service concession asset. The Board decided that the grantor recognises an asset provided by the operator and an upgrade to an existing asset of the grantor as a service concession asset if the grantor controls the asset. The grantor controls the asset if the grantor exhibits the specific control concept in paragraph 8(a) that a grantor controls the asset if the “grantor controls or regulates what services the operator must provide with the asset, to whom it must provide them and at what price”. This mirrors the control concept in AASB Interpretation 12. The AASB noted that a broader concept of control currently applies in other accounting Standards and that an asset that does not meet the control and regulation definition of this standard, may still need to be recognised under other accounting Standards. The Board noted that entities that are established for service concession arrangements would already need to consider the requirements of AASB 10. The Board decided to include an Application Guidance to make explicit the requirement to apply the broader concept of control.

BC17A The Board deliberated on whether long term arrangements and privatisation and outsourcing arrangements should be scoped out of the requirements of the Standard, or whether they should be assessed to determine if they meet the control criteria of paragraphs 8 or 9 of the Standard. The Board decided that where the arrangements meet the conditions of paragraphs 8 or 9, the arrangements should be accounted for as service concession arrangements. The Board also agreed that this approach would apply to entities that operate in the regulated public utilities industry for the supply of water, sewerage, electricity or other public services. This approach would ensure the substance of an arrangement determines whether the arrangement is subject to this Standard.

BC17B The Board considered whether the Application Guidance should require where there is a change in the grantor’s control of the asset, the arrangement should be assessed to determine whether it is still within the scope of the Standard. The Board concluded that the Standard should include such Application Guidance similar to existing requirements such as AASB 117, AASB 10 and AASB Interpretation 4. The Application Guidance should also require where the grantor no longer controls the asset, as specified in paragraph 8(a) of the Standard, the grantor assesses whether the asset shall be recognised under another Accounting Standard.

BC17C The Board considered whether the Application Guidance should provide guidance on what constitutes ‘significant residual interest’, including the determination of ‘current value’ and its relationship with the ‘whole-of-life’ in determining whether the grantor controls a significant residual interest as set out in ~~has control of the asset under~~ paragraph 8(b).

BC17D The Board decided that:

- (a) what constitutes ‘significant’ varies from one entity to another and is a matter of judgement for the individual entity and not a decision for the Board to make; and
- (b) to date, the term ‘significant’ is used in numerous Standards without specific guidance as to what would constitute ‘significant’. The Board did not believe that specific guidance on the term of ‘significant’ in the service concession arrangement Standard would be appropriate. If the Board were to provide guidance on the term ‘significant’, the Board would need to refer the matter to the International Accounting Standards Board for consideration. ~~The~~ IASB consideration would have implications beyond service concession arrangements.

BC17E This Standard requires the residual interest in the asset to be determined as the estimated current value of the asset as if it were already of the age and in the condition expected at the end of the period of the service concession arrangements. The Board considered whether guidance should be provided in the determination

**Comment [SD22]:**

BC17A

**Comment [SD24]:**  
Decision 9:  
BC17B

**Comment [SD25]:**  
Decision 10:  
BC17C-BC17F

of 'current value'. The Board noted that the IASB Exposure Draft ED/2015/3 *Conceptual Framework for Financial Reporting* provides guidance that the current value for an asset would be its fair value in accordance with AASB 13.

BC17F The Board also considered the relationship between 'significant residual interest' and 'whole-of-life' in determining whether the grantor has control of an asset. The Board decided that consistent with the application guidance paragraph AG2, if the term of the service concession arrangement:

- (a) \_\_\_\_\_ is not the whole-of-life of the asset, then paragraph 8 of the Standard applies; or
- (b) \_\_\_\_\_ is the whole-of-life of the asset, then paragraph 9 of the Standard applies.

The Board noted this is consistent with the general observation that the amount of residual interest at the end of an arrangement is inversely proportional to the term of the service concession arrangement relative to the useful life of the asset. That is, the residual interest at the end of the arrangement is likely to be significant if the term of the arrangement is not the majority portion of the whole-of-life of the asset. Consequently, such an arrangement would be scoped in the Standard by paragraphs 8(a) and (b). Alternatively, where the residual interest is insignificant, the arrangement would be scoped in the Standard by paragraph 8(a).

### **Measurement of a Service Concession Asset**

BC17G The Board considered the measurement of a service concession asset at fair value in accordance with AASB 13 in relation to:

- (a) \_\_\_\_\_ the characteristics of the asset;
- (b) \_\_\_\_\_ the unit of account of the asset; and
- (c) \_\_\_\_\_ the valuation technique used to measure the fair value of the asset.

BC17H In considering the characteristics of the asset when measuring fair value, the Board noted AASB 13 requires the grantor to consider the characteristics of the service concession asset that market participants would take into account when pricing the asset at the measurement date. Characteristics include, for example, the condition and location of the asset as well as any restrictions on the sale, transfer or use of the asset. The effect of restrictions on the sale or use of the service concession asset, this will depend on whether the restriction is deemed to be a characteristic of the asset or a characteristic of the grantor holding the asset. Where a restriction would transfer with the asset in an assumed sale or transfer, then the restriction would generally be deemed a characteristic of the asset and would likely be considered by a market participant in pricing the asset. On the other hand, a restriction that is specific to the grantor and that would not transfer with the asset in an assumed sale would not be considered in measuring the fair value of the asset. Whether a restriction is a characteristic of the service concession asset or specific to the grantor will require judgement based on the specific facts and circumstances of the arrangement.

BC17I This assessment is important under the grant of the right to the operator model, where the grantor has provided the operator with a right to charge the users of the asset. To the extent that a market participant (acting in its economic best interest) would take into account the fact that a third-party operator has been granted a right of access to charge users in measuring the fair value of the asset, this could result in a different fair value being recognised from that which may arise under the financial liability model for an equivalent asset without such a characteristic.

BC17J Conversely, a market participant may consider that the right of access provided to the operator does not represent a restriction on the use of the asset. In a service concession arrangement, control of the asset and therefore the right of use of the asset is retained by the grantor (and transferred to the market participant in the hypothetical transaction). Under this view, the right of access provided to the operator would not represent a restriction on the use of the asset.

BC17K The Board also noted the view that the service potential of a service concession asset (such as a road) that arises under the financial liability model and the service potential of an identical asset (such as a toll road) that arises under a grant of the right to the operator model is the same from the grantor's perspective as both assets will provide the same utility to the public and hence should be fair valued consistently. However, the concept of service potential is not a consideration in determining fair value under AASB 13.

BC17L The Board discussed the unit of account in AASB 13, which defines it as "The level at which an asset or a liability is aggregated or disaggregated in a Standard for recognition purposes". The Board noted there are three possible bases for the unit of account of a service concession asset:

- (a) \_\_\_\_\_ the service concession period;
- (b) \_\_\_\_\_ both the concession period and any remaining useful life; or

**Comment [SD26]:**  
**Decision 11:**  
BC17G-BC17Y

(c) the useful life of the end of the term of the arrangement (the residual).

BC17M Some may view the grant of the right to the operator as meaning that the asset should be measured only in relation to service potential after the service concession period has expired, i.e. at the asset's residual value. This is on the basis that the market participant buyer will not have the right to all the cash flows that could be generated by the asset as the right to the cash flows for the service concession period has been granted to the operator. This view adopts the notion that the individual asset, being the service concession asset's residual value, is the unit of account under AASB 13. Therefore, the service concession asset's fair value is only the cash flows that can be directly generated by the asset. The implication of this view is that the fair value of the asset could be measured at a zero amount or at the asset's residual value.

BC17N In the development of IFRIC 12 *Service Concession Arrangements*, IFRIC decided that an operator in a service concession arrangement does not have the right to control the underlying use of the asset. Instead, the operator has access to operate the asset to provide a service on behalf of the grantor. In essence, the operator acts as a service provider (IFRIC 12, paragraphs BC24 and BC25). Accordingly, it is the grantor that has control of the underlying use of the asset during both the service concession period and any residual period. The Board therefore concluded in determining the fair value of a service concession asset, the unit of account is the asset over its entire useful life, including any residual value of the asset.

BC17O AASB 13 outlines three 'widely used' valuation techniques for measuring fair value (AASB 13.62): the market approach, the cost approach, and the income approach. AASB 13 does not specify which valuation technique is more appropriate. Instead, the AASB 13 states that:

(a) an entity uses the valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of relevant observable inputs and minimising the use of unobservable inputs;

(b) the inputs selected should be consistent with the characteristics of the asset or liability that market participants would take into account in a transaction for the asset or liability; and

(c) the fair value hierarchy (Level 1, 2 and 3) prioritises the inputs to the valuation techniques, not the valuation techniques used to measure fair value.

BC17P The Board noted service concession assets are specialised assets with features and terms and conditions determined on a project by project basis and are rarely exchanged between willing sellers and buyers. Accordingly, it is highly unlikely that the market approach to measuring the service concession asset would be applicable, although this will depend on facts and circumstances.

BC17Q The cost approach "reflects the amount that would be required currently to replace the service capacity of an asset (often referred to as current replacement cost)" (AASB13, paragraph B8). This approach uses Level 2 and/or Level 3 inputs which are based on observable or unobservable inputs. Current replacement cost is the "cost to a market participant buyer to acquire or construct a substitute asset of comparable utility, adjusted for obsolescence" (AASB13, paragraph B9). The Board noted the current replacement cost is often used to measure the fair value of assets that are used in combination with other assets or with other assets and liabilities. This is particularly relevant if the service concession asset is part of an integrated network of assets and services, such as the provision of a transport network.

BC17R The Board considered a possible view under the financial liability model of using the grantor's contractual obligation to make a pre-determined series of payments to the operator as a measure of the fair value of the asset, with the liability being accounted for as a financial liability. The grantor's payments to the operator may represent the price that the grantor has paid for the construction, development, acquisition or upgrade of a service concession asset based on the expectations of the cash flows which could be generated by the asset. This measurement is analogous to the discounted cash flow method of the income approach, where the grantor's pre-determined series of payments to the operator takes into account the factors that reflect the current market expectation of the cash flows to be generated by the asset. Accordingly, the income approach could be used to initially measure a service concession asset where there are observable inputs (such as the cash flow generated by the asset from users of the asset). However, the cash payments promised to the operator under the financial liability model may have no direct relationship to the cash flows expected to be generated from the asset, i.e. the grantor may choose not to charge users. Similarly, the fees the operator can charge users may be at a significant discount and hence this would not reflect the fair value of the asset, i.e. what a market participant may choose to charge under commercial terms.

BC17S The Board noted an alternative view to BC17R is that under the financial liability model, the fair value of the asset is most likely the price (i.e. cost) that the grantor has agreed to pay the operator for the "construction, development, acquisition or upgrade of a service concession asset". Consequently, the grantor's contractual obligation to make payments to the operator in return for the service concession asset could be a method in measuring the fair value of the asset as the initial cost of obtaining the asset. Under this approach, the components of grantor's payments can be used to determine the fair value of the asset.

However, any components of the payments which the grantor is contractually obliged to make to the operator which would not be included by a market participant in determining fair value should be excluded from the determination of fair value.

BC17T The Board noted that consistent with its conclusion that the relevant unit of account is the whole asset that covers both the concession period and beyond, not just the residual or the service concession period, a public sector entity often uses the asset's capacity or service potential to provide goods or services to achieve public service objectives. The asset would often be valued using the current replace cost under the cost approach irrespective of whether the cost of replacing the asset will be recovered by the expected cash flows that the asset may generate. This would support the view that, the price the market participant buyer is prepared to pay for the asset is the cost that would be required to replace the service potential or capacity of the asset. This is especially the case where the market participant buyer is another government entity. This view would be consistent with measuring the asset using the current replace cost method of the cost approach of AASB 13.

BC17U Consequently, a service concession asset that is accounted for using the grant of the right to the operator model, the current replacement cost method of measuring the asset could be more appropriate. The rationale for this approach could be that the market participant buyer acquires the asset to achieve public service objectives. Therefore, the price that the market participant buyer is prepared to pay for the asset could be the cost to replace the asset. Consequently, if the fair value of the asset is measured at a zero amount or at the asset's residual value on the basis that the grantor has granted to the operator the right to the cash flows generated by the asset (as referred to in paragraph BC17M), this would understate the true value of the asset.

BC17V The Board concluded that a service concession asset is a specialised asset that is obtained through construction, development, acquisition or upgrade of a service concession asset. The asset's capacity or service potential is used to achieve public service objectives irrespective of whether the cost of the asset will be recovered by the expected cash flows that the asset may generate. The Board considered the more appropriate fair value to initially measure the asset is the cost approach being cost to construct or develop the entire asset. For the financial liability model, this cost could be determined by considering the payments that the grantor is contractually obliged to pay the operator in exchange for the asset.

BC17W The Board also reiterated that ultimately, the valuation technique used to fair value a service concession asset is dependent on the specific terms and conditions of each service concession arrangement. That is, the appropriate valuation technique to measure the fair value of the service concession asset should reflect the principles of AASB 13 that is appropriate in circumstances and for which sufficient data are available that maximises the relevant observable inputs and minimises the unobservable inputs that are consistent with the characteristics for the asset.

BC17X The Board noted that the view not to provide additional guidance on the determination of 'fair value' would be consistent with the Board's decision in paragraph BC29 that when an existing Australian Accounting Standard specifies the accounting and reporting for a component of a service concession arrangement, this Standard references the specific Australian Accounting Standard and no additional guidance are provided.

BC17Y Additionally, the Board decided that guidance on the measurement of an asset, including a service concession asset, would need to be part of a separate project on the fair value of public sector assets in the future.

BC17Z The Board considered whether the Standard should include additional guidance in the following areas and decided there is sufficient guidance in the Standard and/or existing Accounting Standards that does not warrant additional guidance:

(a) determination of the fair value of a partly constructed asset – the Board noted there are a broad range of techniques in AASB 15 *Revenue from Contracts with Customers* (including the percentage of completion method) that depending on the nature of the contract, can be used to establish the fair value of a partly constructed asset.

(b) initial valuation of an intangible service concession asset – the Board noted an intangible service concession arrangement on initial recognition should not be different to other tangible service concession assets. That is, a service concession asset is a specialised asset and the asset's capacity or service potential is used to achieve public service objectives irrespective of whether the cost of the asset will be recovered by the expected cash flows that the asset may generate. Consequently, the cost of the asset at initial recognition should not be affected by whether the service concession asset is a tangible or intangible asset. Additionally, AASB 138 *Intangible Assets* requires an intangible asset to be measured at cost. Cost is defined as the amount of cash or cash equivalents paid or the fair value of other consideration given to acquire an asset at the time of its acquisition or construction. Fair value is defined with reference to AASB 13.

**Comment [SD27]:**  
**Decision 13:**  
BC17Z(a)

**Comment [SD28]:**  
**Decision 14:**  
BC17Z(b)

(c) accounting for economic obsolescence in determining the fair value of the asset – the Board noted due to the nature of a service concession asset being a specialised asset which the grantor uses for its service potential to achieve public services, only the cost approach of AASB 13 to measuring the fair value of a service concession asset is relevant. The cost approach (also referred to as the current replacement cost) reflects the amount required to currently replace the service capacity of an asset. Current replacement cost takes into consideration obsolescence. AASB 13 provides examples of obsolescence to include physical deterioration, functional (technological) obsolescence and economic (external) obsolescence and is broader than depreciation.

**Comment [SD29]:**  
**Decision 15:**  
BC17Z(c)

## Recognition of a Liability

### The Financial Liability Model

- BC18 The Board considered issues relating to the recognition of a financial liability and, consistent with IPSAS 32, decided that a financial liability should be recognised when the grantor has to make a determinable series of cash payments of cash or cash equivalents to the operator.
- BC19 A financial liability arises in cases when the grantor is obligated to make a determinable series of payments to the operator because the grantor has an obligation as a result of the contract to deliver cash or another financial asset to another entity (the operator). The Board agreed with the IPSASB conclusion that when there is a determinable series of payments of cash or cash equivalents, the payments should be allocated as a reduction of the liability, an imputed finance charge, and charges for services provided by the operator under the service concession arrangement.
- BC20 AASB Interpretation 12 requires the financial asset to be accounted for in accordance with the relevant Australian Accounting Standard on financial instruments (AASB 9 *Financial Instruments*, AASB 132 *Financial Instruments: Presentation* or AASB 139 *Financial Instruments: Recognition and Measurement*, as appropriate).

BC20A The Board decided to require the finance charge specified in paragraph 20 to be determined, in the first instance, using the rate implicit to the arrangement, consistent with the effective interest rate in AASB 9, if this is practicable to determine. This is consistent with the Board's objective in setting transaction neutral Standards.

BC20B If the rate implicit to the arrangement is not practicable to determine, the operator's cost of capital specific to the service concession asset, the grantor's incremental borrowing rate, or another rate appropriate to the terms and conditions of the arrangement is used.

- BC21 This [draft] Standard also provides guidance for determining the interest rate to be used to determine the finance charge under the financial liability model. The Board noted the grantor ordinarily ~~would~~ may not have sufficient information to determine a market rate. Accordingly, the guidance requires the operator's cost of capital to be used, if that is practicable to determine. It also permits the use of other rates that are appropriate to the specific terms and conditions of the service concession arrangement.

**Comment [SD30]:**  
**Decision 16:**  
-BC20A-BC20B  
-Amended BC21

### The Grant of a Right to the Operator Model

- BC22 The Board considered the application of AASB 15 *Revenue from Contracts with Customers* to a service concession arrangement, as Australia has an accounting Standard on revenue equivalent to that of IFRS 15 *Revenue from Contracts with Customers*, noting that there is no IPSAS that is equivalent to IFRS 15.
- BC23 Under the grant of a right to the operator model, the grantor promises to transfer to the operator an intangible asset (being a right to charge users of the service concession asset) in exchange for the acquisition, construction or upgrade of a service concession asset and the provision of related future services. The Board considered whether the grantor should recognise revenue or a liability when it obtains control of the service concession asset arising from a service concession arrangement. The Board noted that IPSAS 32 requires a grantor to recognise a liability when the grantor recognises the service concession asset. However, given its policy of transaction neutrality, the Board considered whether the requirements of Australian Accounting Standards, specifically the application of AASB 15 either directly or by analogy, would support:
- the recognition of a liability (consistent with IPSAS 32); or
  - the recognition of revenue because the grantor has no remaining obligations to the operator once it has transferred to the operator the right to charge users.

- BC24 Following extensive discussions and analysis, the Board concluded that, from a grantor's perspective, judgement is required to determine whether a service concession arrangement in which the grantor promises

**Comment [SD31]:**  
**Decision 11:**  
Editorial changes to BC24-BC25

to transfer an intangible asset to the operator would not be a contract with a customer within the scope of AASB 15. The Board considered that the intangible asset that the grantor promises to transfer to the operator in exchange for the operator's services could be view ~~is~~ in the nature of financing the construction of the service concession asset.

BC25 The Board noted that, in a service concession arrangement, the grantor makes promises, either explicitly or implicitly, to undertake activities in relation to the service concession asset that will benefit the operator. This reflects the fact that a service concession asset forms part of the overall public infrastructure that is controlled and managed by the government to provide public services. Although judgement is required to determine if a grantor's rights and obligations would not be within the scope of AASB 15, the Board noted that the promise, or the operator's expectation, that the grantor will undertake activities that benefit the operator is-in some instances may be comparable to promises made by a licensor or expectations of a licensee that the licensor will undertake activities in relation to intellectual property that will benefit the licensee. AASB 15 identifies that those types of licences are licences that provide the licensee with a right to access the underlying intellectual property. AASB 15 specifies that a promise of a right to access intellectual property is a performance obligation that is satisfied over time and, in the event of the licensee performing in advance of the licensor, the licensor would recognise a contract liability for its remaining performance obligation to provide access. Consequently, given these similarities in the relationships between licensor and licensee and between grantor and operator, the Board concluded that the grantor's obligations to undertake activities in relation to the service concession asset that will benefit the operator should also be accounted similarly to a contract liability. The grantor would subsequently recognise revenue as the 'access' is provided to the operator over the service concession period. The Board also noted that the IASB is reviewing the guidance on such licences and the outcome of the review may further support the Board's views on this matter.

BC26 In some service concession arrangements, the right to charge users is described as a licence. Although a 'licence to charge users' in the context of the service concession arrangement is not within the scope of AASB 15, other licences provided by governments might represent a contract with a customer and therefore be accounted for in accordance with AASB 15. Licences provided by governments that represent a contract with a customer and accounted for in accordance with AASB 15 might require a recognition of a liability for any portion of the revenue that is not yet earned. The Board noted that determining whether a particular licence granted by a government is within the scope of AASB 15 would depend on the facts and circumstances relating to each type of licence.

BC26A The Board considered whether the Standard should include additional guidance on the principles-based approach to recognising revenue under the grant of the right to the operator model. The Board assessed the following options of whether to:

- (a) require revenue to be recognised on a systematic and rational basis using the straight line method. This option would eliminate the divergence in recognising revenue but would not be consistent with the objective of the Board to develop a principles-based accounting standard; or
- (b) not provide additional guidance in the final Standard on the basis there is sufficient guidance in the Standard that does not warrant additional guidance. Paragraph AG52 requires revenue to be recognised and liability reduced based on the economic substance of the arrangement, usually as access to the service concession asset is provided to the operator over the term of the service concession arrangement.

BC26B The Board decided there is sufficient guidance in the Standard that does not warrant additional guidance and revenue recognition should be based on the economic substance of the specific arrangement to be assessed by the grantor involved and not be prescribed by the Board.

### Other Liability Recognition and Measurement Models

BC26C The Board considered the following alternative recognition and measurement models to the grant of the right to the operator model:

- (a) applying the financial liability model to all service concession arrangements; and
- (b) accounting for the assets of the arrangement and not the right to charge users for the use of the service concession asset that has been granted by the grantor to the operator; and
- (c) application of AASB 140 *Investment Property* by analogy.

BC26D The Board in analysing whether the financial liability model can be applied to all service concession arrangements considered whether:

- (a) the party (the grantor or the users of the service concession arrangement) that makes the payment to the operator determines the accounting model for the grantor to recognise a

**Comment [SD32]:  
Decision 18:  
BC26A-BC26B**

**Comment [SD33]:  
Decision 12:  
BC26C-BC26G**

service concession liability. Consistent with IFRIC 12, the Board concluded the party that has the responsibility to make payments to the operator is important in determining the accounting model for the grantor's recognition of the liability. This view takes into account who bears the demand risk (i.e. the ability and willingness of the users to pay for the services). This view is consistent with the proposed models in this Standard and mirrors the requirements of IFRIC 12. That is, under the financial liability model, the grantor is the party with the primary responsibility to make payments to the operator for the services. This contrasts with the grant of the right to the operator model, where the operator is the party that bears the demand risks. Accordingly, the use of different models (i.e. financial liability model and grant of the right to the operator model) to account for the liability is more appropriate.

(b) the grantor has a financial liability where in an arrangement where the operator has been granted the right to charge third-party users for the use of the asset. The Board concluded that the grantor under the grant of the right to the operator arrangement does not have a financial liability as defined in AASB 132. That is, the grantor does not have a contractual obligation to deliver cash or another financial asset to the operator nor exchange the financial assets or financial liability with the operator under potentially unfavourable conditions.

BC26E The Board considered whether the more appropriate approach to measure the fair value of the asset, under the grant of the right to the operator model, is to recognise only the cash flows that the asset can directly generate (residual cash flows to the grantor). The implication is that the fair value of the asset could be measured at a zero amount or at the asset's residual value which exclude the rights to the cash flows generated by the asset that have been granted to the operator.

BC26F The Board also considered the application of AASB 140 by analogy to address the implication of measuring the asset's fair value based on only the cash flows that are directly generated by the service concession asset under the GORTO model. This analysis assumes that while this approach is appropriate under AASB 13, the resulting fair value of the service concession asset however may not reflect the true value of the asset. The use of AASB 140 by analogy attempts to overcome this.

BC26G The Board concluded that the approaches under BC26C-BC26F would understate the value of the asset and therefore not be appropriate to apply AASB 140 by analogy to measure the asset's fair value.

### **Dividing an Arrangement**

BC26H The Board decided to include additional guidance on how to divide a hybrid arrangement by stating:

- (a) principle that the liability recognised for a hybrid arrangement is to be initially measured at the same amount as the fair value of the service concession asset;
- (b) the amount to be allocated to the grant of the right to the operator model and financial liability model is depends on the ability of the entity to determine the fair value of the service concession asset to be accounted for under each of models in the hybrid arrangement. Where the fair value of the service concession asset that is accounted for under grant of the right to the operator model can be reliably determined, an acceptable method of dividing the hybrid arrangement is to allocate this amount to the grant of the right to the operator model, with the remainder of the portion of the fair value of the service concession asset to be allocated to the amount recognised under the financial liability model. Alternatively, where the grantor's contractual obligation to make a pre-determined series of payments to the operator in exchange for the service concession asset, an acceptable method of dividing the hybrid arrangement is to allocate this amount to the financial liability model, with the remainder of the portion of the fair value of the service concession asset to be allocated to the amount recognised under the grant of the right to the operator model

**Comment [SD34]:**  
**Decision 17:**  
BC26H

### **Other Revenues**

BC27 The AASB considered whether to include the Application Guidance paragraphs AG55–AG64 of IPSAS 32 for other revenues in this [draft] Standard. 'Other revenues' relate to compensation by the operator to the grantor for access to the service concession asset by providing the grantor with a series of predetermined inflows of resources, including the following:

- (a) an upfront payment or a stream of payments;
- (b) revenue-sharing provisions;

- (c) a reduction in a predetermined series of payments the grantor is required to make to the operator; and
  - (d) rent payments for providing the operator access to a revenue-generating asset.
- BC28 The Board decided that this guidance was not necessary in the Australian context as the existing revenue recognition guidance in Australian Accounting Standards was sufficient.

## **Accounting Issues Addressed in Other Australian Accounting Standards**

- BC29 Because of the complexity of many service concession arrangements, there may be additional accounting issues related to certain terms in the contract (for example, revenues, expenses, guarantees, and contingencies). The Board agreed that it was not necessary to repeat such existing guidance in this [draft] Standard. Accordingly, when an existing Australian Accounting Standard specifies the accounting and reporting for a component of a service concession arrangement, this [draft] Standard references the specific Australian Accounting Standard and no additional guidance is provided. However, the Board noted some cases (for example, revenue recognition) when the application of such an Australian Accounting Standard would be difficult given certain unique features in service concession arrangements. To ensure consistent implementation of this [draft] Standard, the Board decided to provide additional guidance on how the principles in the other Australian Accounting Standards would be applied.

## **Application of this [draft] Standard to Other Government Licences**

- BC30 The AASB discussed the potential analogous interpretation of this [draft] Standard to other government licences, in particular the proposed accounting treatment for when a grantor provides consideration in the form of a right to charge third-party users. Given the importance of service concession arrangements to governments and the current lack of accounting guidance for such arrangements, the Board decided that service concession arrangements should be treated separately from other licences granted by governments.
- BC31 The Board decided to conduct further research on the nature of, and accounting for, government licences. The purpose of this research is to inform the Board as to whether a separate project may be required to consider the accounting for these types of licences.

## **Transition**

- BC32 This [draft] Standard requires an entity to apply this [draft] Standard either retrospectively in accordance with AASB 108 *Accounting Policies, Changes in Accounting Estimates and Errors* or prospectively using deemed cost from the beginning of the earliest period for which comparative information is presented in the financial statements. Deemed cost for service concession assets is the fair value in accordance with AASB 13.
- BC33 The general requirement in AASB 108 is that accounting policy changes should be accounted for retrospectively, except to the extent that retrospective application would be impracticable. The Board noted that there are two aspects to retrospective application: reclassification and remeasurement. The Board took a similar view to the IPSASB that it will usually be practicable to determine retrospectively the appropriate classification of all amounts previously included in a grantor's statement of financial position, but that retrospective remeasurement of service concession assets might not always be practicable, particularly if an entity has not previously recognised service concession assets and related liabilities, revenues, and expenses.
- BC34 The Board noted that, when retrospective restatement is not practicable, AASB 108 requires prospective application from the earliest practicable date, which could be the start of the current reporting period.
- BC35 The [draft] Standard requires that any difference between the value of the asset and the financial liability in the use of deemed cost under the financial liability model is recognised directly in net assets/equity. Additionally, the [draft] Standard requires that if the entity chooses as its accounting policy the revaluation model in AASB 116 or AASB 138, this difference is included in equity. The Board noted that this difference could not be used to offset future changes in the values of an asset or liability. This is consistent with the treatment in AASB 108 for a change in accounting policy. However, this differs from the approach permitted by IPSAS 32, where the difference is included in revaluation surplus.

## Comparison with IPSAS 32

BC36 This [draft] Standard incorporates the key requirements of IPSAS 32 with the main differences detailed in the paragraphs below.

### Scope

BC37 This [draft] Standard applies to all public sector entities and is wider than the scope of IPSAS 32. IPSAS 32 applies to all public sector entities other than a Government Business Enterprise (GBE). A GBE is akin to a for-profit public sector entity. The approach in this [draft] Standard is consistent with the AASB's policy of making accounting Standards that require like transactions and events to be accounted for in a like manner for all types of entities, which is referred to as transaction neutrality.

### Recognition and Measurement of a Service Concession Asset

BC38 This [draft] Standard includes the reference of AASB 13 *Fair Value Measurement* where the grantor initially measures the service concession asset at its fair value. IPSAS 32 does not have a fair value accounting standard similar to AASB 13 and therefore does not include such a reference.

BC39 This [draft] Standard modifies some of the defined terms of IPSAS 32. This [draft] Standard:

- (a) replaces the IPSAS 32 term 'binding arrangement', which "describes contracts and other arrangements that confer similar rights and obligations on the parties to it as if they were in the form of a contract", with the term 'contract', which is defined as an "agreement between two or more parties that creates enforceable rights and obligations";
- (b) modifies the IPSAS 32 definition of a 'grantor' to refer to 'right to access' rather than 'right to use';
- (c) modifies the IPSAS 32 definition of an 'operator' from an entity that "uses the service concession asset" to an entity that has a "right to access the service concession asset"; and
- (d) includes a definition for the term 'public service' that is not in IPSAS 32.

### Application Guidance

BC40 This [draft] Standard includes Application Guidance (AG) paragraphs in addition to those of IPSAS 32. The key AG paragraphs added in this [draft] Standard are as follows:

- (a) defined term 'contract';
- (b) paragraph AG8 emphasises the fundamental principle of control of a service concession asset; and
- (c) paragraphs AG11, AG12, AG14 and AG18 explain when the grantor would control the service concession asset in an environment where the services provided and/or the service pricing is regulated by a third-party regulator.

BC41 This [draft] Standard modifies paragraph AG21 to explicitly require that when an existing asset of the grantor is upgraded (eg increases in capacity) only the upgrade component of the asset is recognised as a service concession asset in accordance with paragraph 8 (or paragraph 9 for a whole-of-life asset).

BC42 This [draft] Standard removes the Application Guidance paragraphs AG55–AG64 of IPSAS 32 for other revenues. The other revenues relate to compensation by the operator to the grantor for the access to the service concession asset by providing the grantor with a series of predetermined inflows of resources. Sufficient revenue recognition guidance for such transaction already exists in Australian Accounting Standards.

BC43 This [draft] Standard modifies paragraph AG72 of IPSAS 32 to require, where the grantor uses deemed cost under the financial liability model, any difference between the value of the asset and the financial liability to be included in equity. IPSAS 32 requires the difference to be included in revaluation surplus when the revaluation model is applied.

#### Comment [SD35]:

##### Note to the Board:

This section has not been updated for changes to the draft Standard resulting from the Board's decisions since the issue of ED 261.

Staff will update this section in the next draft Standard for the Board's consideration
