Basis for conclusions on IAS 33

Australian Accounting Standard AASB 133 Earnings per Share (as amended) is set out in paragraphs 1 – Aus76.2 and Appendices A and C. All the paragraphs have equal authority. Paragraphs in bold type state the main principles. AASB 133 is to be read in the context of other Australian Accounting Standards, including AASB 1048 Interpretation of Standards, which identifies the Australian Accounting Interpretations, and AASB 1057 Application of Australian Accounting Standards. In the absence of explicit guidance, AASB 108 Accounting Policies, Changes in Accounting Estimates and Errors provides a basis for selecting and applying accounting policies.
Comparison with IAS 33

AASB 133 *Earnings per Share* as amended incorporates IAS 33 *Earnings per Share* as issued and amended by the International Accounting Standards Board (IASB). Australian-specific paragraphs (which are not included in IAS 33) are identified with the prefix “Aus”. Paragraphs that apply only to not-for-profit entities begin by identifying their limited applicability.

**Tier 1**

For-profit entities complying with AASB 133 also comply with IAS 33.

Not-for-profit entities’ compliance with IAS 33 will depend on whether any “Aus” paragraphs that specifically apply to not-for-profit entities provide additional guidance or contain applicable requirements that are inconsistent with IAS 33.

**Tier 2**

Entities preparing general purpose financial statements under Australian Accounting Standards – Reduced Disclosure Requirements (Tier 2) will not be in compliance with IFRS Standards.

AASB 1053 *Application of Tiers of Australian Accounting Standards* explains the two tiers of reporting requirements.
Accounting Standard AASB 133
Earnings per Share

Objective

1 The objective of this Standard is to prescribe principles for the determination and presentation of earnings per share, so as to improve performance comparisons between different entities in the same reporting period and between different reporting periods for the same entity. Even though earnings per share data have limitations because of the different accounting policies that may be used for determining ‘earnings’, a consistently determined denominator enhances financial reporting. The focus of this Standard is on the denominator of the earnings per share calculation.

AusCF entities are:
(a) not-for-profit entities; and
(b) for-profit entities that are not applying the Conceptual Framework for Financial Reporting (as identified in AASB 1048 Interpretation of Standards).

For AusCF entities, the term ‘reporting entity’ is defined in AASB 1057 Application of Australian Accounting Standards and Statement of Accounting Concepts SAC 1 Definition of the Reporting Entity also applies. For-profit entities applying the Conceptual Framework for Financial Reporting are set out in paragraph Aus1.1 of the Conceptual Framework.

Scope

2 This Standard shall apply to:
(a) the separate or individual financial statements of an entity:
   (i) whose ordinary shares or potential ordinary shares are traded in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets) or
   (ii) that files, or is in the process of filing, its financial statements with a securities commission or other regulatory organisation for the purpose of issuing ordinary shares in a public market; and
(b) the consolidated financial statements of a group with a parent:
   (i) whose ordinary shares or potential ordinary shares are traded in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets) or
   (ii) that files, or is in the process of filing, its financial statements with a securities commission or other regulatory organisation for the purpose of issuing ordinary shares in a public market.

3 An entity that discloses earnings per share shall calculate and disclose earnings per share in accordance with this Standard.

4 When an entity presents both consolidated financial statements and separate financial statements prepared in accordance with AASB 10 Consolidated Financial Statements and AASB 127 Separate Financial Statements respectively, the disclosures required by this Standard need be presented only on the basis of the consolidated information. An entity that chooses to disclose earnings per share...
based on its separate financial statements shall present such earnings per share information only in its statement of comprehensive income. An entity shall not present such earnings per share information in the consolidated financial statements.

4A If an entity presents items of profit or loss in a separate statement as described in paragraph 10A of AASB 101 Presentation of Financial Statements, it presents earnings per share only in that separate statement.

Definitions

5 The following terms are used in this Standard with the meanings specified:

- **Antidilution** is an increase in earnings per share or a reduction in loss per share resulting from the assumption that convertible instruments are converted, that options or warrants are exercised, or that ordinary shares are issued upon the satisfaction of specified conditions.

- A **contingent share agreement** is an agreement to issue shares that is dependent on the satisfaction of specified conditions.

- **Contingently issuable ordinary shares** are ordinary shares issuable for little or no cash or other consideration upon the satisfaction of specified conditions in a contingent share agreement.

- **Dilution** is a reduction in earnings per share or an increase in loss per share resulting from the assumption that convertible instruments are converted, that options or warrants are exercised, or that ordinary shares are issued upon the satisfaction of specified conditions.

- **Options, warrants and their equivalents** are financial instruments that give the holder the right to purchase ordinary shares.

- An **ordinary share** is an equity instrument that is subordinate to all other classes of equity instruments.

- A **potential ordinary share** is a financial instrument or other contract that may entitle its holder to ordinary shares.

- **Put options** on ordinary shares are contracts that give the holder the right to sell ordinary shares at a specified price for a given period.

6 Ordinary shares participate in profit for the period only after other types of shares such as preference shares have participated. An entity may have more than one class of ordinary shares. Ordinary shares of the same class have the same rights to receive dividends.

7 Examples of potential ordinary shares are:

(a) financial liabilities or equity instruments, including preference shares, that are convertible into ordinary shares;

(b) options and warrants;

(c) shares that would be issued upon the satisfaction of conditions resulting from contractual arrangements, such as the purchase of a business or other assets.

8 Terms defined in AASB 132 Financial Instruments: Presentation are used in this Standard with the meanings specified in paragraph 11 of AASB 132, unless otherwise noted. AASB 132 defines financial instrument, financial asset, financial liability and equity instrument, and provides guidance on applying those definitions. AASB 13 Fair Value Measurement defines fair value and sets out requirements for applying that definition.

Measurement

Basic earnings per share

9 An entity shall calculate basic earnings per share amounts for profit or loss attributable to ordinary equity holders of the parent entity and, if presented, profit or loss from continuing operations attributable to those equity holders.

10 Basic earnings per share shall be calculated by dividing profit or loss attributable to ordinary equity holders of the parent entity (the numerator) by the weighted average number of ordinary shares outstanding (the denominator) during the period.
The objective of basic earnings per share information is to provide a measure of the interests of each ordinary share of a parent entity in the performance of the entity over the reporting period.

Earnings

For the purpose of calculating basic earnings per share, the amounts attributable to ordinary equity holders of the parent entity in respect of:

(a) profit or loss from continuing operations attributable to the parent entity; and
(b) profit or loss attributable to the parent entity

shall be the amounts in (a) and (b) adjusted for the after-tax amounts of preference dividends, differences arising on the settlement of preference shares, and other similar effects of preference shares classified as equity.

All items of income and expense attributable to ordinary equity holders of the parent entity that are recognised in a period, including tax expense and dividends on preference shares classified as liabilities are included in the determination of profit or loss for the period attributable to ordinary equity holders of the parent entity (see AASB 101).

The after-tax amount of preference dividends that is deducted from profit or loss is:

(a) the after-tax amount of any preference dividends on non-cumulative preference shares declared in respect of the period; and
(b) the after-tax amount of the preference dividends for cumulative preference shares required for the period, whether or not the dividends have been declared. The amount of preference dividends for the period does not include the amount of any preference dividends for cumulative preference shares paid or declared during the current period in respect of previous periods.

Preference shares that provide for a low initial dividend to compensate an entity for selling the preference shares at a discount, or an above-market dividend in later periods to compensate investors for purchasing preference shares at a premium, are sometimes referred to as increasing rate preference shares. Any original issue discount or premium on increasing rate preference shares is amortised to retained earnings using the effective interest method and treated as a preference dividend for the purposes of calculating earnings per share.

Preference shares may be repurchased under an entity’s tender offer to the holders. The excess of the fair value of the consideration paid to the preference shareholders over the carrying amount of the preference shares represents a return to the holders of the preference shares and a charge to retained earnings for the entity. This amount is deducted in calculating profit or loss attributable to ordinary equity holders of the parent entity.

Early conversion of convertible preference shares may be induced by an entity through favourable changes to the original conversion terms or the payment of additional consideration. The excess of the fair value of the ordinary shares or other consideration paid over the fair value of the ordinary shares issuable under the original conversion terms is a return to the preference shareholders, and is deducted in calculating profit or loss attributable to ordinary equity holders of the parent entity.

Any excess of the carrying amount of preference shares over the fair value of the consideration paid to settle them is added in calculating profit or loss attributable to ordinary equity holders of the parent entity.

Shares

For the purpose of calculating basic earnings per share, the number of ordinary shares shall be the weighted average number of ordinary shares outstanding during the period.

Using the weighted average number of ordinary shares outstanding during the period reflects the possibility that the amount of shareholders’ capital varied during the period as a result of a larger or smaller number of shares being outstanding at any time. The weighted average number of ordinary shares outstanding during the period is the number of ordinary shares outstanding at the beginning of the period, adjusted by the number of ordinary shares bought back or issued during the period multiplied by a time-weighting factor. The time-weighting factor is the number of days that the shares are outstanding as a proportion of the total number of days in the period; a reasonable approximation of the weighted average is adequate in many circumstances.

Shares are usually included in the weighted average number of shares from the date consideration is receivable (which is generally the date of their issue), for example:

(a) ordinary shares issued in exchange for cash are included when cash is receivable;
ordinary shares issued on the voluntary reinvestment of dividends on ordinary or preference shares are included when dividends are reinvested;

ordinary shares issued as a result of the conversion of a debt instrument to ordinary shares are included from the date that interest ceases to accrue;

ordinary shares issued in place of interest or principal on other financial instruments are included from the date that interest ceases to accrue;

ordinary shares issued in exchange for the settlement of a liability of the entity are included from the settlement date;

ordinary shares issued as consideration for the acquisition of an asset other than cash are included as of the date on which the acquisition is recognised; and

ordinary shares issued for the rendering of services to the entity are included as the services are rendered.

The timing of the inclusion of ordinary shares is determined by the terms and conditions attaching to their issue. Due consideration is given to the substance of any contract associated with the issue.

Ordinary shares issued as part of the consideration transferred in a business combination are included in the weighted average number of shares from the acquisition date. This is because the acquirer incorporates into its statement of comprehensive income the acquiree’s profits and losses from that date.

Ordinary shares that will be issued upon the conversion of a mandatorily convertible instrument are included in the calculation of basic earnings per share from the date the contract is entered into.

Contingently issuable shares are treated as outstanding and are included in the calculation of basic earnings per share only from the date when all necessary conditions are satisfied (ie the events have occurred). Shares that are issuable solely after the passage of time are not contingently issuable shares, because the passage of time is a certainty. Outstanding ordinary shares that are contingently returnable (ie subject to recall) are not treated as outstanding and are excluded from the calculation of basic earnings per share until the date the shares are no longer subject to recall.

The weighted average number of ordinary shares outstanding during the period and for all periods presented shall be adjusted for events, other than the conversion of potential ordinary shares, that have changed the number of ordinary shares outstanding without a corresponding change in resources.

Ordinary shares may be issued, or the number of ordinary shares outstanding may be reduced, without a corresponding change in resources. Examples include:

- a capitalisation or bonus issue (sometimes referred to as a stock dividend);
- a bonus element in any other issue, for example a bonus element in a rights issue to existing shareholders;
- a share split; and
- a reverse share split (consolidation of shares).

In a capitalisation or bonus issue or a share split, ordinary shares are issued to existing shareholders for no additional consideration. Therefore, the number of ordinary shares outstanding is increased without an increase in resources. The number of ordinary shares outstanding before the event is adjusted for the proportionate change in the number of ordinary shares outstanding as if the event had occurred at the beginning of the earliest period presented. For example, on a two-for-one bonus issue, the number of ordinary shares outstanding before the issue is multiplied by three to obtain the new total number of ordinary shares, or by two to obtain the number of additional ordinary shares.

A consolidation of ordinary shares generally reduces the number of ordinary shares outstanding without a corresponding reduction in resources. However, when the overall effect is a share repurchase at fair value, the reduction in the number of ordinary shares outstanding is the result of a corresponding reduction in resources. An example is a share consolidation combined with a special dividend. The weighted average number of ordinary shares outstanding for the period in which the combined transaction takes place is adjusted for the reduction in the number of ordinary shares from the date the special dividend is recognised.
Diluted earnings per share

30 An entity shall calculate diluted earnings per share amounts for profit or loss attributable to ordinary equity holders of the parent entity and, if presented, profit or loss from continuing operations attributable to those equity holders.

31 For the purpose of calculating diluted earnings per share, an entity shall adjust profit or loss attributable to ordinary equity holders of the parent entity, and the weighted average number of shares outstanding, for the effects of all dilutive potential ordinary shares.

32 The objective of diluted earnings per share is consistent with that of basic earnings per share—to provide a measure of the interest of each ordinary share in the performance of an entity—while giving effect to all dilutive potential ordinary shares outstanding during the period. As a result:

(a) profit or loss attributable to ordinary equity holders of the parent entity is increased by the after-tax amount of dividends and interest recognised in the period in respect of the dilutive potential ordinary shares and is adjusted for any other changes in income or expense that would result from the conversion of the dilutive potential ordinary shares; and

(b) the weighted average number of ordinary shares outstanding is increased by the weighted average number of additional ordinary shares that would have been outstanding assuming the conversion of all dilutive potential ordinary shares.

Earnings

33 For the purpose of calculating diluted earnings per share, an entity shall adjust profit or loss attributable to ordinary equity holders of the parent entity, as calculated in accordance with paragraph 12, by the after-tax effect of:

(a) any dividends or other items related to dilutive potential ordinary shares deducted in arriving at profit or loss attributable to ordinary equity holders of the parent entity as calculated in accordance with paragraph 12;

(b) any interest recognised in the period related to dilutive potential ordinary shares; and

(c) any other changes in income or expense that would result from the conversion of the dilutive potential ordinary shares.

34 After the potential ordinary shares are converted into ordinary shares, the items identified in paragraph 33(a)–(c) no longer arise. Instead, the new ordinary shares are entitled to participate in profit or loss attributable to ordinary equity holders of the parent entity. Therefore, profit or loss attributable to ordinary equity holders of the parent entity calculated in accordance with paragraph 12 is adjusted for the items identified in paragraph 33(a)–(c) and any related taxes. The expenses associated with potential ordinary shares include transaction costs and discounts accounted for in accordance with the effective interest method (see AASB 9).

35 The conversion of potential ordinary shares may lead to consequential changes in income or expenses. For example, the reduction of interest expense related to potential ordinary shares and the resulting increase in profit or reduction in loss may lead to an increase in the expense related to a non-discretionary employee profit-sharing plan. For the purpose of calculating diluted earnings per share, profit or loss attributable to ordinary equity holders of the parent entity is adjusted for any such consequential changes in income or expense.

Shares

36 For the purpose of calculating diluted earnings per share, the number of ordinary shares shall be the weighted average number of ordinary shares calculated in accordance with paragraphs 19 and 26, plus the weighted average number of ordinary shares that would be issued on the conversion of all the dilutive potential ordinary shares into ordinary shares. Dilutive potential ordinary shares shall be deemed to have been converted into ordinary shares at the beginning of the period or, if later, the date of the issue of the potential ordinary shares.

37 Dilutive potential ordinary shares shall be determined independently for each period presented. The number of dilutive potential ordinary shares included in the year-to-date period is not a weighted average of the dilutive potential ordinary shares included in each interim computation.

38 Potential ordinary shares are weighted for the period they are outstanding. Potential ordinary shares that are cancelled or allowed to lapse during the period are included in the calculation of diluted earnings per share only for the portion of the period during which they are outstanding. Potential ordinary shares that are
converted into ordinary shares during the period are included in the calculation of diluted earnings per share from the beginning of the period to the date of conversion; from the date of conversion, the resulting ordinary shares are included in both basic and diluted earnings per share.

The number of ordinary shares that would be issued on conversion of dilutive potential ordinary shares is determined from the terms of the potential ordinary shares. When more than one basis of conversion exists, the calculation assumes the most advantageous conversion rate or exercise price from the standpoint of the holder of the potential ordinary shares.

A subsidiary, joint venture or associate may issue to parties other than the parent or investors with joint control of, or significant influence over, the investee potential ordinary shares that are convertible into either ordinary shares of the subsidiary, joint venture or associate, or ordinary shares of the parent or investors with joint control of, or significant influence (the reporting entity) over, the investee. If these potential ordinary shares of the subsidiary, joint venture or associate have a dilutive effect on the basic earnings per share of the reporting entity, they are included in the calculation of diluted earnings per share.

### Dilutive potential ordinary shares

| 41 | Potential ordinary shares shall be treated as dilutive when, and only when, their conversion to ordinary shares would decrease earnings per share or increase loss per share from continuing operations. |
| 42 | An entity uses profit or loss from continuing operations attributable to the parent entity as the control number to establish whether potential ordinary shares are dilutive or antidilutive. Profit or loss from continuing operations attributable to the parent entity is adjusted in accordance with paragraph 12 and excludes items relating to discontinued operations. |
| 43 | Potential ordinary shares are antidilutive when their conversion to ordinary shares would increase earnings per share or decrease loss per share from continuing operations. The calculation of diluted earnings per share does not assume conversion, exercise, or other issue of potential ordinary shares that would have an antidilutive effect on earnings per share. |
| 44 | In determining whether potential ordinary shares are dilutive or antidilutive, each issue or series of potential ordinary shares is considered separately rather than in aggregate. The sequence in which potential ordinary shares are considered may affect whether they are dilutive. Therefore, to maximise the dilution of basic earnings per share, each issue or series of potential ordinary shares is considered in sequence from the most dilutive to the least dilutive, ie dilutive potential ordinary shares with the lowest ‘earnings per incremental share’ are included in the diluted earnings per share calculation before those with a higher earnings per incremental share. Options and warrants are generally included first because they do not affect the numerator of the calculation. |

### Options, warrants and their equivalents

| 45 | For the purpose of calculating diluted earnings per share, an entity shall assume the exercise of dilutive options and warrants of the entity. The assumed proceeds from these instruments shall be regarded as having been received from the issue of ordinary shares at the average market price of ordinary shares during the period. The difference between the number of ordinary shares issued and the number of ordinary shares that would have been issued at the average market price of ordinary shares during the period shall be treated as an issue of ordinary shares for no consideration. |
| 46 | Options and warrants are dilutive when they would result in the issue of ordinary shares for less than the average market price of ordinary shares during the period. The amount of the dilution is the average market price of ordinary shares during the period minus the issue price. Therefore, to calculate diluted earnings per share, potential ordinary shares are treated as consisting of both the following: |
| 47 | Options and warrants have a dilutive effect only when the average market price of ordinary shares during the period exceeds the exercise price of the options or warrants (ie they are ‘in the money’). Previously reported earnings per share are not retroactively adjusted to reflect changes in prices of ordinary shares. |
For share options and other share-based payment arrangements to which AASB 2 *Share-based Payment* applies, the issue price referred to in paragraph 46 and the exercise price referred to in paragraph 47 shall include the fair value (measured in accordance with AASB 2) of any goods or services to be supplied to the entity in the future under the share option or other share-based payment arrangement.

Employee share options with fixed or determinable terms and non-vested ordinary shares are treated as options in the calculation of diluted earnings per share, even though they may be contingent on vesting. They are treated as outstanding on the grant date. Performance-based employee share options are treated as contingently issuable shares because their issue is contingent upon satisfying specified conditions in addition to the passage of time.

### Convertible instruments

The dilutive effect of convertible instruments shall be reflected in diluted earnings per share in accordance with paragraphs 33 and 36.

Convertible preference shares are antidilutive whenever the amount of the dividend on such shares declared in or accumulated for the current period per ordinary share obtainable on conversion exceeds basic earnings per share. Similarly, convertible debt is antidilutive whenever its interest (net of tax and other changes in income or expense) per ordinary share obtainable on conversion exceeds basic earnings per share.

The redemption or induced conversion of convertible preference shares may affect only a portion of the previously outstanding convertible preference shares. In such cases, any excess consideration referred to in paragraph 17 is attributed to those shares that are redeemed or converted for the purpose of determining whether the remaining outstanding preference shares are dilutive. The shares redeemed or converted are considered separately from those shares that are not redeemed or converted.

### Contingently issuable shares

As in the calculation of basic earnings per share, contingently issuable ordinary shares are treated as outstanding and included in the calculation of diluted earnings per share if the conditions are satisfied (ie the events have occurred). Contingently issuable shares are included from the beginning of the period (or from the date of the contingent share agreement, if later). If the conditions are not satisfied, the number of contingently issuable shares included in the diluted earnings per share calculation is based on the number of shares that would be issuable if the end of the period were the end of the contingency period. Restatement is not permitted if the conditions are not met when the contingency period expires.

If attainment or maintenance of a specified amount of earnings for a period is the condition for contingent issue and if that amount has been attained at the end of the reporting period but must be maintained beyond the end of the reporting period for an additional period, then the additional ordinary shares are treated as outstanding, if the effect is dilutive, when calculating diluted earnings per share. In that case, the calculation of diluted earnings per share is based on the number of ordinary shares that would be issued if the amount of earnings at the end of the reporting period were the amount of earnings at the end of the contingency period. Because earnings may change in a future period, the calculation of basic earnings per share does not include such contingently issuable ordinary shares until the end of the contingency period because not all necessary conditions have been satisfied.

The number of ordinary shares contingently issuable may depend on the future market price of the ordinary shares. In that case, if the effect is dilutive, the calculation of diluted earnings per share is based on the number of ordinary shares that would be issuable if the market price at the end of the reporting period were the market price at the end of the contingency period. If the condition is based on an average of market prices over a period of time that extends beyond the end of the reporting period, the average for the period of time that has lapsed is used. Because the market price may change in a future period, the calculation of basic earnings per share does not include such contingently issuable ordinary shares until the end of the contingency period because not all necessary conditions have been satisfied.

The number of ordinary shares contingently issuable may depend on future earnings and future prices of the ordinary shares. In such cases, the number of ordinary shares included in the diluted earnings per share calculation is based on both conditions (ie earnings to date and the current market price at the end of the reporting period). Contingently issuable ordinary shares are not included in the diluted earnings per share calculation unless both conditions are met.

In other cases, the number of ordinary shares contingently issuable depends on a condition other than earnings or market price (for example, the opening of a specific number of retail stores). In such cases, assuming that the present status of the condition remains unchanged until the end of the contingency period,
the contingently issuable ordinary shares are included in the calculation of diluted earnings per share according to the status at the end of the reporting period.

Contingently issuable potential ordinary shares (other than those covered by a contingent share agreement, such as contingently issuable convertible instruments) are included in the diluted earnings per share calculation as follows:

(a) an entity determines whether the potential ordinary shares may be assumed to be issuable on the basis of the conditions specified for their issue in accordance with the contingent ordinary share provisions in paragraphs 52–56; and

(b) if those potential ordinary shares should be reflected in diluted earnings per share, an entity determines their impact on the calculation of diluted earnings per share by following the provisions for options and warrants in paragraphs 45–48, the provisions for convertible instruments in paragraphs 49–51, the provisions for contracts that may be settled in ordinary shares or cash in paragraphs 58–61, or other provisions, as appropriate.

However, exercise or conversion is not assumed for the purpose of calculating diluted earnings per share unless exercise or conversion of similar outstanding potential ordinary shares that are not contingently issuable is assumed.

Contracts that may be settled in ordinary shares or cash

When an entity has issued a contract that may be settled in ordinary shares or cash at the entity’s option, the entity shall presume that the contract will be settled in ordinary shares, and the resulting potential ordinary shares shall be included in diluted earnings per share if the effect is dilutive.

When such a contract is presented for accounting purposes as an asset or a liability, or has an equity component and a liability component, the entity shall adjust the numerator for any changes in profit or loss that would have resulted during the period if the contract had been classified wholly as an equity instrument. That adjustment is similar to the adjustments required in paragraph 33.

For contracts that may be settled in ordinary shares or cash at the holder’s option, the more dilutive of cash settlement and share settlement shall be used in calculating diluted earnings per share.

An example of a contract that may be settled in ordinary shares or cash is a debt instrument that, on maturity, gives the entity the unrestricted right to settle the principal amount in cash or in its own ordinary shares. Another example is a written put option that gives the holder a choice of settling in ordinary shares or cash.

Purchased options

Contracts such as purchased put options and purchased call options (ie options held by the entity on its own ordinary shares) are not included in the calculation of diluted earnings per share because including them would be antidilutive. The put option would be exercised only if the exercise price were higher than the market price and the call option would be exercised only if the exercise price were lower than the market price.

Written put options

Contracts that require the entity to repurchase its own shares, such as written put options and forward purchase contracts, are reflected in the calculation of diluted earnings per share if the effect is dilutive. If these contracts are ‘in the money’ during the period (ie the exercise or settlement price is above the average market price for that period), the potential dilutive effect on earnings per share shall be calculated as follows:

(a) it shall be assumed that at the beginning of the period sufficient ordinary shares will be issued (at the average market price during the period) to raise proceeds to satisfy the contract;

(b) it shall be assumed that the proceeds from the issue are used to satisfy the contract (ie to buy back ordinary shares); and

(c) the incremental ordinary shares (the difference between the number of ordinary shares assumed issued and the number of ordinary shares received from satisfying the contract) shall be included in the calculation of diluted earnings per share.
### Retrospective adjustments

### Disclosure

<table>
<thead>
<tr>
<th>Paragraph</th>
<th>Text</th>
</tr>
</thead>
<tbody>
<tr>
<td>70</td>
<td>An entity shall disclose the following:</td>
</tr>
<tr>
<td></td>
<td>(a) the amounts used as the numerators in calculating basic and diluted earnings per share, and a reconciliation of those amounts to profit or loss attributable to the parent entity for the period. The reconciliation shall include the individual effect of each class of instruments that affects earnings per share.</td>
</tr>
<tr>
<td></td>
<td>(b) the weighted average number of ordinary shares used as the denominator in calculating basic and diluted earnings per share, and a reconciliation of these denominators to each other. The reconciliation shall include the individual effect of each class of instruments that affects earnings per share.</td>
</tr>
<tr>
<td></td>
<td>(c) instruments (including contingently issuable shares) that could potentially dilute basic earnings per share in the future, but were not included in the calculation of diluted earnings per share because they are antidilutive for the period(s) presented.</td>
</tr>
<tr>
<td></td>
<td>(d) a description of ordinary share transactions or potential ordinary share transactions, other than those accounted for in accordance with paragraph 64, that occur after the reporting period and that would have changed significantly the number of ordinary shares or</td>
</tr>
</tbody>
</table>
potential ordinary shares outstanding at the end of the period if those transactions had occurred before the end of the reporting period.

Examples of transactions in paragraph 70(d) include:

(a) an issue of shares for cash;
(b) an issue of shares when the proceeds are used to repay debt or preference shares outstanding at the end of the reporting period;
(c) the redemption of ordinary shares outstanding;
(d) the conversion or exercise of potential ordinary shares outstanding at the end of the reporting period into ordinary shares;
(e) an issue of options, warrants, or convertible instruments; and
(f) the achievement of conditions that would result in the issue of contingently issuable shares.

Earnings per share amounts are not adjusted for such transactions occurring after the reporting period because such transactions do not affect the amount of capital used to produce profit or loss for the period.

Financial instruments and other contracts generating potential ordinary shares may incorporate terms and conditions that affect the measurement of basic and diluted earnings per share. These terms and conditions may determine whether any potential ordinary shares are dilutive and, if so, the effect on the weighted average number of shares outstanding and any consequent adjustments to profit or loss attributable to ordinary equity holders. The disclosure of the terms and conditions of such financial instruments and other contracts is encouraged, if not otherwise required (see AASB 7 Financial Instruments: Disclosures).

If an entity discloses, in addition to basic and diluted earnings per share, amounts per share using a reported component of the statement of comprehensive income other than one required by this Standard, such amounts shall be calculated using the weighted average number of ordinary shares determined in accordance with this Standard. Basic and diluted amounts per share relating to such a component shall be disclosed with equal prominence and presented in the notes. An entity shall indicate the basis on which the numerator(s) is (are) determined, including whether amounts per share are before tax or after tax. If a component of the statement of comprehensive income is used that is not reported as a line item in the statement of comprehensive income, a reconciliation shall be provided between the component used and a line item that is reported in the statement of comprehensive income.

Paragraph 73 applies also to an entity that discloses, in addition to basic and diluted earnings per share, amounts per share using a reported item of profit or loss, other than one required by this Standard.

Effective date

An entity shall apply this Standard for annual periods beginning on or after 1 January 2018. Earlier application is encouraged for periods beginning after 24 July 2014 but before 1 January 2018. If an entity applies the Standard for a period beginning before 1 January 2018, it shall disclose that fact.

Withdrawal of other pronouncements

[Deleted by the AASB]

Commencement of the legislative instrument

For legal purposes, this legislative instrument commences on 31 December 2017.
Withdrawal of AASB pronouncements

Aus76.2 This Standard repeals AASB 133 *Earnings per Share* issued in July 2004. Despite the repeal, after the time this Standard starts to apply under section 334 of the Corporations Act (either generally or in relation to an individual entity), the repealed Standard continues to apply in relation to any period ending before that time as if the repeal had not occurred.

[Note: When this Standard applies under section 334 of the Corporations Act (either generally or in relation to an individual entity), it supersedes the application of the repealed Standard.]
Appendix A
Application guidance

This appendix is an integral part of the Standard.

Profit or loss attributable to the parent entity

A1 For the purpose of calculating earnings per share based on the consolidated financial statements, profit or loss attributable to the parent entity refers to profit or loss of the consolidated entity after adjusting for non-controlling interests.

Rights issues

A2 The issue of ordinary shares at the time of exercise or conversion of potential ordinary shares does not usually give rise to a bonus element. This is because the potential ordinary shares are usually issued for fair value, resulting in a proportionate change in the resources available to the entity. In a rights issue, however, the exercise price is often less than the fair value of the shares. Therefore, as noted in paragraph 27(b), such a rights issue includes a bonus element. If a rights issue is offered to all existing shareholders, the number of ordinary shares to be used in calculating basic and diluted earnings per share for all periods before the rights issue is the number of ordinary shares outstanding before the issue, multiplied by the following factor:

<table>
<thead>
<tr>
<th>Fair value per share immediately before the exercise of rights</th>
<th>Theoretical ex-rights fair value per share</th>
</tr>
</thead>
</table>

The theoretical ex-rights fair value per share is calculated by adding the aggregate fair value of the shares immediately before the exercise of the rights to the proceeds from the exercise of the rights, and dividing by the number of shares outstanding after the exercise of the rights. Where the rights are to be publicly traded separately from the shares before the exercise date, fair value is measured at the close of the last day on which the shares are traded together with the rights.

Control number

A3 To illustrate the application of the control number notion described in paragraphs 42 and 43, assume that an entity has profit from continuing operations attributable to the parent entity of CU4,800,1 a loss from discontinued operations attributable to the parent entity of (CU7,200), a loss attributable to the parent entity of (CU2,400), and 2,000 ordinary shares and 400 potential ordinary shares outstanding. The entity’s basic earnings per share is CU2.40 for continuing operations, (CU3.60) for discontinued operations and (CU1.20) for the loss. The 400 potential ordinary shares are included in the diluted earnings per share calculation because the resulting CU2.00 earnings per share for continuing operations is dilutive, assuming no profit or loss impact of those 400 potential ordinary shares. Because profit from continuing operations attributable to the parent entity is the control number, the entity also includes those 400 potential ordinary shares in the calculation of the other earnings per share amounts, even though the resulting earnings per share amounts are antidilutive to their comparable basic earnings per share amounts, ie the loss per share is less [(CU3.00) per share for the loss from discontinued operations and (CU1.00) per share for the loss].

Average market price of ordinary shares

A4 For the purpose of calculating diluted earnings per share, the average market price of ordinary shares assumed to be issued is calculated on the basis of the average market price of the ordinary shares during the period. Theoretically, every market transaction for an entity’s ordinary shares could be included in the determination of the average market price. As a practical matter, however, a simple average of weekly or monthly prices is usually adequate.

A5 Generally, closing market prices are adequate for calculating the average market price. When prices fluctuate widely, however, an average of the high and low prices usually produces a more representative price. The method used to calculate the average market price is used consistently unless it is no longer adequate.

---

1 In this guidance, monetary amounts are denominated in ‘currency units (CU)’.
representative because of changed conditions. For example, an entity that uses closing market prices to calculate the average market price for several years of relatively stable prices might change to an average of high and low prices if prices start fluctuating greatly and the closing market prices no longer produce a representative average price.

Options, warrants and their equivalents

A6 Options or warrants to purchase convertible instruments are assumed to be exercised to purchase the convertible instrument whenever the average prices of both the convertible instrument and the ordinary shares obtainable upon conversion are above the exercise price of the options or warrants. However, exercise is not assumed unless conversion of similar outstanding convertible instruments, if any, is also assumed.

A7 Options or warrants may permit or require the tendering of debt or other instruments of the entity (or its parent or a subsidiary) in payment of all or a portion of the exercise price. In the calculation of diluted earnings per share, those options or warrants have a dilutive effect if (a) the average market price of the related ordinary shares for the period exceeds the exercise price or (b) the selling price of the instrument to be tendered is below that at which the instrument may be tendered under the option or warrant agreement and the resulting discount establishes an effective exercise price below the market price of the ordinary shares obtainable upon exercise. In the calculation of diluted earnings per share, those options or warrants are assumed to be exercised and the debt or other instruments are assumed to be tendered. If tendering cash is more advantageous to the option or warrant holder and the contract permits tendering cash, tendering of cash is assumed. Interest (net of tax) on any debt assumed to be tendered is added back as an adjustment to the numerator.

A8 Similar treatment is given to preference shares that have similar provisions or to other instruments that have conversion options that permit the investor to pay cash for a more favourable conversion rate.

A9 The underlying terms of certain options or warrants may require the proceeds received from the exercise of those instruments to be applied to redeem debt or other instruments of the entity (or its parent or a subsidiary). In the calculation of diluted earnings per share, those options or warrants are assumed to be exercised and the proceeds applied to purchase the debt at its average market price rather than to purchase ordinary shares. However, the excess proceeds received from the assumed exercise over the amount used for the assumed purchase of debt are considered (ie assumed to be used to buy back ordinary shares) in the diluted earnings per share calculation. Interest (net of tax) on any debt assumed to be purchased is added back as an adjustment to the numerator.

Written put options

A10 To illustrate the application of paragraph 63, assume that an entity has outstanding 120 written put options on its ordinary shares with an exercise price of CU35. The average market price of its ordinary shares for the period is CU28. In calculating diluted earnings per share, the entity assumes that it issued 150 shares at CU28 per share at the beginning of the period to satisfy its put obligation of CU4,200. The difference between the 150 ordinary shares issued and the 120 ordinary shares received from satisfying the put option (30 incremental ordinary shares) is added to the denominator in calculating diluted earnings per share.

Instruments of subsidiaries, joint ventures or associates

A11 Potential ordinary shares of a subsidiary, joint venture or associate convertible into either ordinary shares of the subsidiary, joint venture or associate, or ordinary shares of the parent or investors with joint control of, or significant influence (the reporting entity) over, the investee are included in the calculation of diluted earnings per share as follows:

(a) instruments issued by a subsidiary, joint venture or associate that enable their holders to obtain ordinary shares of the subsidiary, joint venture or associate are included in calculating the diluted earnings per share data of the subsidiary, joint venture or associate. Those earnings per share are then included in the reporting entity’s earnings per share calculations based on the reporting entity’s holding of the instruments of the subsidiary, joint venture or associate.

(b) instruments of a subsidiary, joint venture or associate that are convertible into the reporting entity’s ordinary shares are considered among the potential ordinary shares of the reporting entity for the purpose of calculating diluted earnings per share. Likewise, options or warrants issued by a subsidiary, joint venture or associate to purchase ordinary shares of the reporting entity are considered among the potential ordinary shares of the reporting entity in the calculation of consolidated diluted earnings per share.
A12 For the purpose of determining the earnings per share effect of instruments issued by a reporting entity that are convertible into ordinary shares of a subsidiary, joint venture or associate, the instruments are assumed to be converted and the numerator (profit or loss attributable to ordinary equity holders of the parent entity) adjusted as necessary in accordance with paragraph 33. In addition to those adjustments, the numerator is adjusted for any change in the profit or loss recorded by the reporting entity (such as dividend income or equity method income) that is attributable to the increase in the number of ordinary shares of the subsidiary, joint venture or associate outstanding as a result of the assumed conversion. The denominator of the diluted earnings per share calculation is not affected because the number of ordinary shares of the reporting entity outstanding would not change upon assumed conversion.

Participating equity instruments and two-class ordinary shares

A13 The equity of some entities includes:
   (a) instruments that participate in dividends with ordinary shares according to a predetermined formula (for example, two for one) with, at times, an upper limit on the extent of participation (for example, up to, but not beyond, a specified amount per share).
   (b) a class of ordinary shares with a different dividend rate from that of another class of ordinary shares but without prior or senior rights.

A14 For the purpose of calculating diluted earnings per share, conversion is assumed for those instruments described in paragraph A13 that are convertible into ordinary shares if the effect is dilutive. For those instruments that are not convertible into a class of ordinary shares, profit or loss for the period is allocated to the different classes of shares and participating equity instruments in accordance with their dividend rights or other rights to participate in undistributed earnings. To calculate basic and diluted earnings per share:
   (a) profit or loss attributable to ordinary equity holders of the parent entity is adjusted (a profit reduced and a loss increased) by the amount of dividends declared in the period for each class of shares and by the contractual amount of dividends (or interest on participating bonds) that must be paid for the period (for example, unpaid cumulative dividends).
   (b) the remaining profit or loss is allocated to ordinary shares and participating equity instruments to the extent that each instrument shares in earnings as if all of the profit or loss for the period had been distributed. The total profit or loss allocated to each class of equity instrument is determined by adding together the amount allocated for dividends and the amount allocated for a participation feature.
   (c) the total amount of profit or loss allocated to each class of equity instrument is divided by the number of outstanding instruments to which the earnings are allocated to determine the earnings per share for the instrument.

For the calculation of diluted earnings per share, all potential ordinary shares assumed to have been issued are included in outstanding ordinary shares.

Partly paid shares

A15 Where ordinary shares are issued but not fully paid, they are treated in the calculation of basic earnings per share as a fraction of an ordinary share to the extent that they were entitled to participate in dividends during the period relative to a fully paid ordinary share.

A16 To the extent that partly paid shares are not entitled to participate in dividends during the period they are treated as the equivalent of warrants or options in the calculation of diluted earnings per share. The unpaid balance is assumed to represent proceeds used to purchase ordinary shares. The number of shares included in diluted earnings per share is the difference between the number of shares subscribed and the number of shares assumed to be purchased.
Appendix C
Australian reduced disclosure requirements

This appendix is an integral part of the Standard.

AusC1 Paragraphs 3-73A and the Application Guidance Appendix do not apply to entities preparing general purpose financial statements under Australian Accounting Standards – Reduced Disclosure Requirements and are identified in this Standard by shading of the relevant text. This Standard applies to relevant Tier 1 entities preparing general purpose financial statements in accordance with Australian Accounting Standards and to relevant Tier 2 entities that elect to comply with this Standard. Entities applying Australian Accounting Standards – Reduced Disclosure Requirements may elect to comply with some or all of the excluded requirements.

Illustrative examples

These examples accompany, but are not part of, AASB 133.

Example 1 Increasing rate preference shares

Reference: AASB 133, paragraphs 12 and 15

Entity D issued non-convertible, non-redeemable class A cumulative preference shares of CU100 par value on 1 January 20X1. The class A preference shares are entitled to a cumulative annual dividend of CU7 per share starting in 20X4.

At the time of issue, the market rate dividend yield on the class A preference shares was 7 per cent a year. Thus, Entity D could have expected to receive proceeds of approximately CU100 per class A preference share if the dividend rate of CU7 per share had been in effect at the date of issue.

In consideration of the dividend payment terms, however, the class A preference shares were issued at CU81.63 per share, ie at a discount of CU18.37 per share. The issue price can be calculated by taking the present value of CU100, discounted at 7 per cent over a three-year period.

Because the shares are classified as equity, the original issue discount is amortised to retained earnings using the effective interest method and treated as a preference dividend for earnings per share purposes. To calculate basic earnings per share, the following imputed dividend per class A preference share is deducted to determine the profit or loss attributable to ordinary equity holders of the parent entity:

<table>
<thead>
<tr>
<th>Year</th>
<th>Carrying amount of class A preference shares 1 January</th>
<th>Imputed(^{a)}) dividend</th>
<th>Carrying(^{b)}) amount of class A preference shares 31 December</th>
<th>Dividend paid</th>
</tr>

<td>107.00</td>
<td>(7.00)</td>
</tr>
</tbody>
</table>

\(^{a)}\) at 7%

\(^{b)}\) This is before dividend payment.
### Example 2  Weighted average number of ordinary shares

Reference: AASB 133, paragraphs 19–21

<table>
<thead>
<tr>
<th>Date</th>
<th>Description</th>
<th>Shares issued</th>
<th>Treasury(^a) shares</th>
<th>Shares outstanding</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 January 20X1</td>
<td>Balance at beginning of year</td>
<td>2,000</td>
<td>300</td>
<td>1,700</td>
</tr>
<tr>
<td>31 May 20X1</td>
<td>Issue of new shares for cash</td>
<td>800</td>
<td>–</td>
<td>2,500</td>
</tr>
<tr>
<td>1 December 20X1</td>
<td>Purchase of treasury shares for cash</td>
<td>–</td>
<td>250</td>
<td>2,250</td>
</tr>
<tr>
<td>31 December 20X1</td>
<td>Balance at year-end</td>
<td>2,800</td>
<td>550</td>
<td>2,250</td>
</tr>
</tbody>
</table>

Calculation of weighted average:

\[
(1,700 \times \frac{5}{12}) + (2,500 \times \frac{6}{12}) + (2,250 \times \frac{1}{12}) = 2,146 \text{ shares}
\]

\[
(1,700 \times \frac{12}{12}) + (800 \times \frac{7}{12}) - (250 \times \frac{1}{12}) = 2,146 \text{ shares}
\]

\(^a\) Treasury shares are equity instruments reacquired and held by the issuing entity itself or by its subsidiaries.

### Example 3  Bonus issue

Reference: AASB 133, paragraphs 26, 27(a) and 28

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Profit attributable to ordinary equity holders of the parent entity 20X0</td>
</tr>
<tr>
<td>Profit attributable to ordinary equity holders of the parent entity 20X1</td>

<tr>
<td>Ordinary shares outstanding until 30 September 20X1</td>
</tr>
<tr>
<td>Bonus issue 1 October 20X1</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>Basic earnings per share 20X1</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>Basic earnings per share 20X0</td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

\[
\text{Basic earnings per share 20X1} = \frac{\text{CU600}}{(200 + 400)} = \text{CU1.00}
\]

\[
\text{Basic earnings per share 20X0} = \frac{\text{CU180}}{(200 + 400)} = \text{CU0.30}
\]

Because the bonus issue was without consideration, it is treated as if it had occurred before the beginning of 20X0, the earliest period presented.
Example 4 Rights issue

</tr>
</tbody>
</table>

Calculation of theoretical ex-rights value per share

\[
\frac{\text{Fair value of all outstanding shares before the exercise of rights} + \text{total amount received from exercise of rights}}{\text{Number of shares outstanding before exercise} + \text{number of shares issued in the exercise}}
\]

\[
\frac{(\text{CU11.00} \times 500 \text{ shares}) + (\text{CU5.00} \times 100 \text{ shares})}{500 \text{ shares} + 100 \text{ shares}}
\]

Theoretical ex-rights value per share = CU10.00

Calculation of adjustment factor

\[
\frac{\text{Fair value per share before exercise of rights}}{\text{Theoretical ex-rights value per share}}
\]

\[
\frac{\text{CU11.00}}{\text{CU10.00}} = 1.10
\]

Calculation of basic earnings per share

\[
\begin{array}{ccc}
\text{20X0} & \text{20X1} & \text{20X2} \\
\hline
\text{20X0 basic EPS as originally reported:} & \text{CU1,100} \times 500 \text{ shares} & \text{CU2.20} \\
\text{20X0 basic EPS restated for rights issue:} & \text{CU1,100} & \text{CU2.00} \\
\text{(500 shares} \times 1.1) & \text{CU2.00} \\
\text{20X1 basic EPS including effects of rights issue:} & \text{CU1,500} & \text{CU2.54} \\
\text{(500} \times 1.1 \times \frac{1}{2} \text{)} + (600 \times \frac{10}{12}) & \text{CU2.54} \\
\text{20X2 basic EPS:} & \text{CU1,800} \times 600 \text{ shares} & \text{CU3.00}
\end{array}
\]
Example 5  Effects of share options on diluted earnings per share

Reference: AASB 133, paragraphs 45–47

Profit attributable to ordinary equity holders of the parent entity for year 20X1  CU1,200,000
Weighted average number of ordinary shares outstanding during year 20X1  500,000 shares
Average market price of one ordinary share during year 20X1  CU20.00
Weighted average number of shares under option during year 20X1  100,000 shares
Exercise price for shares under option during year 20X1  CU15.00

Calculation of earnings per share

<table>
<thead>
<tr>

<td></td>
</tr>
</tbody>
</table>

Weighted average number of shares that would have been issued at average market price: (100,000 × CU15.00) ÷ CU20.00

(a)  (75,000)

Diluted earnings per share

CU1,200,000  525,000  CU2.29

(a) Earnings have not increased because the total number of shares has increased only by the number of shares (25,000) deemed to have been issued for no consideration (see paragraph 46(b) of the Standard).

Example 5A  Determining the exercise price of employee share options

Weighted average number of unvested share options per employee  1,000
Weighted average amount per employee to be recognised over the remainder of the vesting period for employee services to be rendered as consideration for the share options, determined in accordance with AASB 2 Share-based Payment  CU1,200
Cash exercise price of unvested share options  CU15

Calculation of adjusted exercise price

Fair value of services yet to be rendered per employee:  CU1,200
Fair value of services yet to be rendered per option: (CU1,200 ÷ 1,000)  CU1.20
Total exercise price of share options: (CU15.00 + CU1.20)  CU16.20
**Example 6 Convertible bonds**

Reference: AASB 133, paragraphs 33, 34, 36 and 49

Profit attributable to ordinary equity holders of the parent entity: CU1,004
Ordinary shares outstanding: 1,000
Basic earnings per share: CU1.00
Convertible bonds: 100

Each block of 10 bonds is convertible into three ordinary shares

Interest expense for the current year relating to the liability component of the convertible bonds: CU10
Current and deferred tax relating to that interest expense: CU4

Note: the interest expense includes amortisation of the discount arising on initial recognition of the liability component (see AASB 132 Financial Instruments: Presentation).

Adjusted profit attributable to ordinary equity holders of the parent entity: CU1,004 + CU10 – CU4 = CU1,010

Number of ordinary shares resulting from conversion of bonds: 30
Number of ordinary shares used to calculate diluted earnings per share: 1,000 + 30 = 1,030

Diluted earnings per share: CU1,010 / 1,030 = CU0.98

**Example 7 Contingently issuable shares**

Reference: AASB 133, paragraphs 19, 24, 36, 37, 41–43 and 52

Ordinary shares outstanding during 20X1: 1,000,000 (there were no options, warrants or convertible instruments outstanding during the period)

An agreement related to a recent business combination provides for the issue of additional ordinary shares based on the following conditions:

- 5,000 additional ordinary shares for each new retail site opened during 20X1
- 1,000 additional ordinary shares for each CU1,000 of consolidated profit in excess of CU2,000,000 for the year ended 31 December 20X1

Retail sites opened during the year: one on 1 May 20X1
one on 1 September 20X1

Consolidated year-to-date profit attributable to ordinary equity holders of the parent entity: CU1,100,000 as of 31 March 20X1
CU2,300,000 as of 30 June 20X1
CU1,900,000 as of 30 September 20X1 (including a CU450,000 loss from a discontinued operation)
CU2,900,000 as of 31 December 20X1

---

2 This example does not illustrate the classification of the components of convertible financial instruments as liabilities and equity or the classification of related interest and dividends as expenses and equity as required by AASB 132.

</tbody>
</table>

<sup>(a)</sup> Company A does not have year-to-date profit exceeding CU2,000,000 at 31 March 20X1. The Standard does not permit projecting future earnings levels and including the related contingent shares.  
<sup>(b)</sup> ([CU2,300,000 − CU2,000,000] ÷ 1,000) × 1,000 shares = 300,000 shares.  
<sup>(c)</sup> Year-to-date profit is less than CU2,000,000.  
<sup>(d)</sup> ([CU2,900,000 − CU2,000,000] ÷ 1,000) × 1,000 shares = 900,000 shares.  
<sup>(e)</sup> Because the loss during the third quarter is attributable to a loss from a discontinued operation, the antidilution rules do not apply. The control number (ie profit or loss from, continuing operations attributable to the equity holders of the parent entity) is positive. Accordingly, the effect of potential ordinary shares is included in the calculation of diluted earnings per share.
Example 8 Convertible bonds settled in shares or cash at the issuer’s option

Reference: AASB 133, paragraphs 31–33, 36, 58 and 59

An entity issues 2,000 convertible bonds at the beginning of Year 1. The bonds have a three-year term, and are issued at par with a face value of CU1,000 per bond, giving total proceeds of CU2,000,000. Interest is payable annually in arrears at a nominal annual interest rate of 6 per cent. Each bond is convertible at any time up to maturity into 250 ordinary shares. The entity has an option to settle the principal amount of the convertible bonds in ordinary shares or in cash.

When the bonds are issued, the prevailing market interest rate for similar debt without a conversion option is 9 per cent. At the issue date, the market price of one ordinary share is CU3. Income tax is ignored.

Profit attributable to ordinary equity holders of the parent entity Year 1
Ordinary shares outstanding 1,200,000
Convertible bonds outstanding 2,000
Allocation of proceeds of the bond issue:
Liability component CU1,848,122\(^{(a)}\)
Equity component CU151,878
CU2,000,000

\((a)\) This represents the present value of the principal and interest discounted at 9% – CU2,000,000 payable at the end of three years; CU120,000 payable annually in arrears for three years.

The liability and equity components would be determined in accordance with AASB 132 Financial Instruments: Presentation. These amounts are recognised as the initial carrying amounts of the liability and equity components. The amount assigned to the issuer conversion option equity element is an addition to equity and is not adjusted.

Basic earnings per share Year 1:
\[
\frac{CU1,000,000}{1,200,000} = CU0.83 \text{ per ordinary share}
\]

Diluted earnings per share Year 1:

It is presumed that the issuer will settle the contract by the issue of ordinary shares. The dilutive effect is therefore calculated in accordance with paragraph 59 of the Standard.

\[
\frac{CU1,000,000 + CU166,331\(^{(a)}\)}{1,200,000 + 500,000\(^{(b)}\)} = CU0.69 \text{ per ordinary share}
\]

\((a)\) Profit is adjusted for the accretion of CU166,331 (CU1,848,122 × 9%) of the liability because of the passage of time.

\((b)\) 500,000 ordinary shares = 250 ordinary shares × 2,000 convertible bonds
Example 9 Calculation of weighted average number of shares; determining the order in which to include dilutive instruments

Primary reference: AASB 133, paragraph 44
Secondary reference: AASB 133, paragraphs 10, 12, 19, 31–33, 36, 41–47, 49 and 50

</tbody>
</table>

Because diluted earnings per share is increased when taking the convertible preference shares into account (from CU3.23 to CU3.45), the convertible preference shares are antidilutive and are ignored in the calculation of diluted earnings per share. Therefore, diluted earnings per share for profit from continuing operations is CU3.23.
### Basic EPS  |  Diluted EPS
---|---
Profit from continuing operations attributable to ordinary equity holders of the parent entity | 5.00  | 3.23
Loss from discontinued operations attributable to ordinary equity holders of the parent entity | (2.00)\(^{(a)}\)  | (0.99)\(^{(b)}\)
Profit attributable to ordinary equity holders of the parent entity | 3.00\(^{(c)}\)  | 2.24\(^{(d)}\)

\(\begin{align*}
(a) & \quad (CU4,000,000) ÷ 2,000,000 = (CU2.00) \\
(b) & \quad (CU4,000,000) ÷ 4,020,000 = (CU0.99) \\
(c) & \quad CU6,000,000 ÷ 2,000,000 = CU3.00 \\
(d) & \quad (CU6,000,000 + CU3,000,000) ÷ 4,020,000 = CU2.24
\end{align*}\)

#### Example 10  Instruments of a subsidiary: calculation of basic and diluted earnings per share\(^4\)

**Reference:** AASB 133, paragraphs 40, A11 and A12

**Parent:**
- Profit attributable to ordinary equity holders of the parent entity: CU12,000 (excluding any earnings of, or dividends paid by, the subsidiary)
- Ordinary shares outstanding: 10,000
- Instruments of subsidiary owned by the parent: 800 ordinary shares
  - 30 warrants exercisable to purchase ordinary shares of subsidiary
  - 300 convertible preference shares

**Subsidiary:**
- Profit: CU5,400
- Ordinary shares outstanding: 1,000
- Warrants: 150, exercisable to purchase ordinary shares of the subsidiary
- Exercise price: CU10
- Average market price of one ordinary share: CU20
- Convertible preference shares: 400, each convertible into one ordinary share
- Dividends on preference shares: CU1 per share

*No inter-company eliminations or adjustments were necessary except for dividends.*

*For the purposes of this illustration, income taxes have been ignored.*

**Subsidiary’s earnings per share**

<table>
<thead>
<tr>

**Example 12 Calculation and presentation of basic and diluted earnings per share (comprehensive example)**

This example illustrates the quarterly and annual calculations of basic and diluted earnings per share in the year 20X1 for Company A, which has a complex capital structure. The control number is profit or loss from continuing operations attributable to the parent entity. Other facts assumed are as follows:

**Average market price of ordinary shares:** The average market prices of ordinary shares for the calendar year 20X1 were as follows:

- First quarter: CU49
- Second quarter: CU60
- Third quarter: CU67
- Fourth quarter: CU67

---

Note: This example does not illustrate the classification of the components of convertible financial instruments as liabilities and equity or the classification of related interest and dividends as expenses and equity as required by AASB 132.
The average market price of ordinary shares from 1 July to 1 September 20X1 was CU65.

**Ordinary shares:** The number of ordinary shares outstanding at the beginning of 20X1 was 5,000,000. On 1 March 20X1, 200,000 ordinary shares were issued for cash.

**Convertible bonds:** In the last quarter of 20X0, 5 per cent convertible bonds with a principal amount of CU12,000,000 due in 20 years were sold for cash at CU1,000 (par). Interest is payable twice a year, on 1 November and 1 May. Each CU1,000 bond is convertible into 40 ordinary shares. No bonds were converted in 20X0. The entire issue was converted on 1 April 20X1 because the issue was called by Company A.

**Convertible preference shares:** In the second quarter of 20X0, 800,000 convertible preference shares were issued for assets in a purchase transaction. The quarterly dividend on each convertible preference share is CU0.05, payable at the end of the quarter for shares outstanding at that date. Each share is convertible into one ordinary share. Holders of 600,000 convertible preference shares converted their preference shares into ordinary shares on 1 June 20X1.

**Warrants:** Warrants to buy 600,000 ordinary shares at CU55 per share for a period of five years were issued on 1 January 20X1. All outstanding warrants were exercised on 1 September 20X1.

**Options:** Options to buy 1,500,000 ordinary shares at CU75 per share for a period of 10 years were issued on 1 July 20X1. No options were exercised during 20X1 because the exercise price of the options exceeded the market price of the ordinary shares.

**Tax rate:** The tax rate was 40 per cent for 20X1.

</tbody>
</table>

**Weighted-average shares**

6,480,000

**Basic EPS**

Profit from continuing operations **CU0.15**

Loss from discontinued operations **(CU0.31)**

Loss **(CU0.16)**
Diluted EPS calculation

Profit from continuing operations attributable to ordinary equity holders of the parent entity \( CU990,000 \)

Plus: profit impact of assumed conversions

Preference share dividends \( CU10,000 \)

Effect of assumed conversions \( CU10,000 \)

Profit from continuing operations attributable to ordinary equity holders of the parent entity including assumed conversions \( CU1,000,000 \)

Loss from discontinued operations attributable to the parent entity \( (CU2,000,000) \)

Loss attributable to ordinary equity holders of the parent entity including assumed conversions \( (CU1,000,000) \)

Weighted-average shares \( 6,480,000 \)

Plus: incremental shares from assumed conversions

Warrants \( 61,538^{(a)} \)

Convertible preference shares \( 200,000 \)

Dilutive potential ordinary shares \( 261,538 \)

Adjusted weighted-average shares \( 6,741,538 \)

Diluted EPS

Profit from continuing operations \( CU0.15 \)

Loss from discontinued operations \( (CU0.30) \)

Loss \( (CU0.15) \)

(a) \([CU65 - CU55] × 600,000 = 92,308 \text{ shares}; 92,308 × \frac{2}{3} = 61,538 \text{ shares}\)

Note: The incremental shares from assumed conversions are included in calculating the diluted per-share amounts for the loss from discontinued operations and loss even though they are antidilutive. This is because the control number (profit from continuing operations attributable to ordinary equity holders of the parent entity, adjusted for preference dividends) was positive (i.e., profit, rather than loss).

Fourth Quarter 20X1

Basic EPS calculation \( CU \)

Loss from continuing operations attributable to the parent entity \( (700,000) \)

Add: preference share dividends \( (10,000) \)

Loss attributable to ordinary equity holders of the parent entity \( (710,000) \)

Dates Shares outstanding Fraction of period Weighted-average shares

Compilation details
Accounting Standard AASB 133 Earnings per Share (as amended)

Compilation details are not part of AASB 133.

This compiled Standard applies to annual periods beginning on or after 1 January 2020. It takes into account amendments up to and including 21 May 2019 and was prepared on 2 March 2020 by the staff of the Australian Accounting Standards Board (AASB).

This compilation is not a separate Accounting Standard made by the AASB. Instead, it is a representation of AASB 133 (August 2015) as amended by other Accounting Standards, which are listed in the Table below.

Table of Standards

Deleted IAS 33 text

Deleted IAS 33 text is not part of AASB 133.

74A IAS 1 (as revised in 2007) amended the terminology used throughout IFRSs. In addition it added paragraphs 4A, 67A, 68A and 73A. An entity shall apply those amendments for annual periods beginning on or after 1 January 2009. If an entity applies IAS 1 (revised 2007) for an earlier period, the amendments shall be applied for that earlier period.

74B IFRS 10 and IFRS 11 Joint Arrangements, issued in May 2011, amended paragraphs 4, 40 and A11. An entity shall apply those amendments when it applies IFRS 10 and IFRS 11.

74C IFRS 13, issued in May 2011, amended paragraphs 8, 47A and A2. An entity shall apply those amendments when it applies IFRS 13.

74D Presentation of Items of Other Comprehensive Income (Amendments to IAS 1), issued in June 2011, amended paragraphs 4A, 67A, 68A and 73A. An entity shall apply those amendments when it applies IAS 1 as amended in June 2011.

75 This Standard supersedes IAS 33 Earnings Per Share (issued in 1997).

76 This Standard supersedes SIC-24 Earnings Per Share—Financial Instruments and Other Contracts that May Be Settled in Shares.
